[Water Asset Management in Times of Climate Change and Digital Transformation](#) Robert Kijak, 2021-09-02 In this book climate change and digital transformation are explored as key strategic drivers for the contemporary practices of water utility companies These drivers seem to be separate

but clearly they are not The recent weather anomalies in water stressed countries are discussed which have been breaking records and become an elevated risk to water assets In parallel the book examines a contextual proposition that the concept of the fourth industrial revolution applied to the water sector Water 4 0 assists with the water supply decentralisation and sustainability in particular climate resilience It further suggests that the implementation of an Asset Management System with reference to the ISO 55001 standard is a useful tool in this process

The Three Axial Ages John Torpey, 2017-03-01 How should we think about the shape of human history since the birth of cities and where are we headed Sociologist and historian John Torpey proposes that the Axial Age of the first millennium BCE when some of the world s major religious and intellectual developments first emerged was only one of three such decisive periods that can be used to directly affect present social problems from economic inequality to ecological destruction Torpey s argument advances the idea that there are in fact three Axial Ages instead of one original Axial Age and several subsequent smaller developments Each of the three ages contributed decisively to how humanity lives and the difficulties it faces The earliest or original Axial Age was a moral one the second was material and revolved around the creation and use of physical

objects and the third is chiefly mental and focused on the technological While there are profound risks and challenges Torpey shows how a worldview that combines the strengths of all three ages has the potential to usher in a period of exceptional human freedom and possibility
