

The background of the book cover is a warm, orange-toned photograph of a body of water at sunset or sunrise. In the foreground, there is a dense network of dark, bare tree branches. Several birds are perched on these branches, and one bird is captured in flight over the water. The overall mood is serene yet somber, reflecting the environmental theme of the book.

Hammer,1977 **Environmental Health Series** United States. Division of Water Supply and Pollution Control,1965 **Biodeterioration of Concrete** Thomas Dyer,2017-07-12 Awareness of the importance of ensuring durability of concrete has been a growing concern of engineers and there is now considerable understanding of the mechanisms which cause its deterioration and means of limiting such damage through the use of

appropriate materials and approaches to design. Many of the deterioration mechanisms which affect concrete are the result of interaction with the non living environment: chlorides in seawater, carbon dioxide in the atmosphere, cyclic freezing and thawing. However, living organisms can also cause damage through both chemical and physical processes which, under the right conditions, can be severe. This book looks at all forms of concrete biodeterioration together for the first time. It examines from a fundamental starting point biodeterioration mechanisms as well as the conditions which allow living organisms—bacteria, fungi, plants and a range of marine organisms—to colonise concrete. A detailed evaluation of chemical compounds produced by living organisms with respect to their interaction with the mineral constituents of concrete and the implications it has for the integrity of structures is also included. Approaches to avoiding biodeterioration of concrete are also covered, including selection of materials, mix proportioning, design and use of protective systems.

Fundamentals of Environmental and Toxicological Chemistry Stanley E. Manahan, 2013-02-25. This book covers university level environmental chemistry with toxicological chemistry integrated throughout. This new edition of a bestseller provides an updated text with an increased emphasis on sustainability and green chemistry. It is organized based on the five spheres of Earth's environment: 1 the hydrosphere (water), 2 the atmosphere (air), 3 the geosphere (solid Earth), 4 the biosphere (life), and 5 the anthrosphere (the part of the environment made and used by humans). The first chapter defines environmental chemistry and each of the five environmental spheres. The second chapter presents the basics of toxicological chemistry and its relationship to environmental chemistry. Subsequent chapters are grouped by sphere, beginning with the hydrosphere and its environmental chemistry: water pollution, sustainability and water as nature's most renewable resource. Chapters then describe the atmosphere, its structure and importance for protecting life on Earth, air pollutants and the sustainability of atmospheric quality. The author explains the nature of the geosphere and discusses soil for growing food as well as geosphere sustainability. He also describes the biosphere and its sustainability. The final sphere described is the anthrosphere. The text explains human influence on the environment, including climate pollution, in and by the anthrosphere, and means of sustaining this sphere. It also discusses renewable, nonpolluting energy and introduces workplace monitoring. For readers needing additional basic chemistry background, the book includes two chapters on general chemistry and organic chemistry. This updated edition includes three new chapters, new examples and figures, and many new homework problems.
