Singh, 2022-06-07 This new 2 volume set Diseases of Field Crops Diagnosis and Management helps to fill the need for research on plant diseases their effects how they spread and effective management measures to mitigate their harmful effects The volumes in this set showcase recent advances in molecular plant pathology and discuss appropriate diagnostic techniques for identification of causal agents and diseases providing the information necessary to establish management strategies The chapters in these two volumes include detailed description of symptoms causal organisms disease cycles epidemiology and management techniques of economically important diseases The volumes explore existing strategies and offer new methods that can be used in an integrated manner and with a comprehensive approach for the management of major diseases of the field crops Also taken into consideration is the impact of global climate change on the spread and severity of plant diseases

Nematode Diseases of Crops and their Management Parvatha P. Reddy, 2021-09-30 This edited book provides knowledge about hemicelluloses biorefinery approaching production life cycle circular economy and valorization by obtaining value added bioproducts and bioenergy A special focus is dedicated to chemical and biochemical compounds produced from the hemicelluloses derivatives platform Hemicelluloses are polysaccharides located into plant cell wall with diverse chemical structures and properties It is the second most spread organic polymer on nature and found in vast lignocellulosic materials from agro and industrial wastes therefore hemicelluloses are considered as abundant and renewable raw material feedstock Biorefinery concept contributes to hemicelluloses production associated with biomass industrial processes Hemicelluloses are alternative sources of sugars for renewable fuels and as platform for chemicals production This book reviews chemical processes for sugar production and degradation obtaining of intermediate and final products and challenges for pentose fermentation Aspects of hemicelluloses chain chemical and enzymatic modifications are presented with focus on physicochemical properties improvement for bioplastic and biomaterial approaches Hemicelluloses are presented as sources for advanced materials in biomedical and pharmaceutical uses and as hydrogel for chemical and medicine deliveries An interdisciplinary approach is needed to cover all the processes involving hemicelluloses its conversion into final and intermediate value added compounds and bioenergy

production Covering this context this book is of interest to teachers students researchers and scientists dedicated to biomass valorization This book is a knowledge source of basic aspects to advanced processing and application for graduate students particularly Besides the book serves as additional reading material for undergraduate students from different courses with a deep interest in biomass and waste conversion valorization and chemical products from hemicelluloses
