

## Toothpick Fish

### Purpose

We are going to experiment with genes and environment for a population of "toothpick" fish. You will learn about the relationships between many different aspects of fish life: genes, traits, variation, survival, and reproduction. The activity here is a simulation, but it models the way fish and other organisms live in nature.

### Materials (for each pair)

- 1 "gene pool" container (e.g. a petri dish)
- 8 green toothpicks
- 8 red toothpicks
- 8 yellow toothpicks

### Introduction

The colored toothpicks represent three different forms of a gene (green, red, and yellow) that controls one fish trait: skin color. The table below tells you which forms (alleles) of the gene are dominant, which are recessive,

|                           |                                                       |
|---------------------------|-------------------------------------------------------|
| The green gene (G) is...  | Dominant to all other color genes                     |
| The red gene (R) is ...   | Recessive to green, incomplete dominance with yellow* |
| The yellow gene (Y) is... | Recessive to green, incomplete dominance with red*    |

\* Combining red and yellow genes results in a fish with orange skin color.

REMEMBER: EACH TOOTHPICK REPRESENTS A GENE, NOT A FISH.

### Directions:

- Count your toothpicks to make sure you have 8 of each color for a total of 24 toothpicks.
- Figure out which gene combinations give rise to which fish colors and fill in the answers on the table on the next page.

| Fish Color (phenotype) | Gene Combinations (Genotype) |
|------------------------|------------------------------|
| Green                  |                              |
| Red                    |                              |
| Orange                 |                              |
| Yellow                 |                              |

Based on the genotypes that you identified in Step 2, answer the questions below. Use Punnett squares to determine your answers.

- a. Can two red fish mate and have green offspring? \_\_\_\_ What is the only possible offspring for two red fish? \_\_\_\_ What is the only possible color for offspring of two yellow fish? \_\_\_\_ Explain your answers.
