Topics In Nonlinear Functional Analysis Topics In Nonlinear Functional Analysis:

Topics in Nonlinear Functional Analysis Djairo Guedes de Figueiredo, 1967 Topics in Nonlinear Functional Analysis L. Nirenberg, 1974 Since its first appearance as a set of lecture notes published by the Courant Institute in 1974 this book served as an introduction to various subjects in nonlinear functional analysis The current edition is a reprint of these notes with added bibliographic references Topological and analytic methods are developed for treating nonlinear ordinary and partial differential equations The first two chapters of the book introduce the notion of topological degree and develop its basic properties These properties are used in later chapters in the discussion of bifurcation theory the possible branching of solutions as parameters vary including the proof of Rabinowitz global bifurcation theorem Stability of the branches is also studied The book concludes with a presentation of some generalized implicit function theorems of Nash Moser type with applications to Kolmogorov Arnold Moser theory and to conjugacy problems For more than 20 years this book continues to be an excellent graduate level textbook and a useful supplementary course text Titles in this series are copublished with the Courant Institute of Mathematical Sciences at New York University **Some Topics in Nonlinear Functional Analysis** Mohan C. Joshi, Ramendra K. Bose, 1985 *Topics in Nonlinear Functional Analysis* L. Nirenberg, 2025 **Topics in nonlinear functional analysis** Louis Nirenberg, 1974 Lectures In Nonlinear Functional Analysis: Synopsis Of Lectures Given At The Faculty Of Physics Of Lomonosov Moscow State University Maxim Olegovich Korpusov, Alexey V Ovchinnikov, Alexander Anatolyevich Panin, 2021-12-28 This book is a systematic presentation of basic notions facts and ideas of nonlinear functional analysis and their applications to nonlinear partial differential equations It begins from a brief introduction to linear functional analysis including various types of convergence and functional spaces The main part of the book is devoted to the theory of nonlinear operators Various methods of the study of nonlinear differential equations based on the facts of nonlinear analysis are presented in detail This book may serve as an introductory textbook for students and undergraduates specializing in modern mathematical physics *Topics in Nonlinear Functional Analysis*, 1970 Topics in Nonlinear Functional Analysis Djairo Guedes de Figueiredo (Mathematiker, Brasilien), 1967 *Geometric Properties of Banach Spaces and Nonlinear Iterations* Charles Chidume, 2008-12-21 The contents of this monograph fall within the general area of nonlinear functional analysis and applications We focus on an important topic within this area geometric properties of Banach spaces and nonlinear iterations a topic of intensive research efforts especially within the past 30 years or so In this theory some geometric properties of Banach spaces play a crucial role In the first part of the monograph we expose these geometric properties most of which are well known As is well known among all infinite dimensional Banach spaces Hilbert spaces have the nicest geometric properties The availability of the inner product the fact that the proximity map or nearest point map of a real Hilbert space H onto a closed convex subset K of H is Lipschitzian with constant 1 and the following two identities $\|x - y\|^2 \leq \|x - y\| \|x + y\|$ $\|x - y\|^2 \leq \|x - y\| \|x + y\|$ which hold for all $x, y \in H$ are some of the geometric properties that char

terize inner product spaces and also make certain problems posed in Hilbert spaces more manageable than those in general Banach spaces. However, as has been rightly observed by M. Hatzewinkel, many and probably most mathematical objects and models do not naturally live in Hilbert spaces. Consequently, to extend some of the Hilbert space techniques to more general Banach spaces, analogues of the identities and have to be developed.

Linear and Nonlinear Functional Analysis with Applications Philippe G. Ciarlet, 2013-10-10 This single volume textbook covers the fundamentals of linear and nonlinear functional analysis illustrating most of the basic theorems with numerous applications to linear and nonlinear partial differential equations and to selected topics from numerical analysis and optimization theory. This book has pedagogical appeal because it features self-contained and complete proofs of most of the theorems, some of which are not always easy to locate in the literature or are difficult to reconstitute. It also offers 401 problems and 52 figures plus historical notes and many original references that provide an idea of the genesis of the important results and it covers most of the core topics from functional analysis.

Nonlinear Functional Analysis Klaus Deimling, 2013-10-09 This text offers a survey of the main ideas, concepts, and methods that constitute nonlinear functional analysis. It features extensive commentary, many examples, and interesting, challenging exercises. 1985 edition.

Topics in Nonlinear Functional Analysis, 1973-1974 [By] L. Nirenberg. Notes by R.A. Artino L. Nirenberg, Courant Institute of Mathematical Sciences, 1974

Nonlinear Functional Analysis and Its Applications Radu Precup, 2021-04-14 This book consists of nine papers covering a number of basic ideas, concepts, and methods of nonlinear analysis as well as some current research problems. Thus, the reader is introduced to the fascinating theory around Brouwer's fixed point theorem to Granas' theory of topological transversality and to some advanced techniques of critical point theory and fixed point theory. Other topics include discontinuous differential equations, new results of metric fixed point theory, robust tracker design problems for various classes of nonlinear systems, and periodic solutions in computer virus propagation models.

Contributions to Nonlinear Functional Analysis Eduardo H. Zarantonello, 2014-05-10 Contributions to Nonlinear Functional Analysis contains the proceedings of a Symposium on Nonlinear Functional Analysis held in Madison, Wisconsin, on April 12-14, 1971, under the sponsorship of the University of Wisconsin's Mathematics Research Center. The symposium provided a forum for discussing various topics related to nonlinear functional analysis, from transversality in nonlinear eigenvalue problems to monotonicity methods in Hilbert spaces and some applications to nonlinear partial differential equations. Comprised of 15 chapters, this book begins by presenting an extension of Leray-Schauder degree and an application to a nonlinear elliptic boundary value problem. The discussion then turns to the use of degree theory to prove the existence of global continua of solutions of nonlinear eigenvalue problems, transversality in nonlinear eigenvalue problems, and how variational structure can be used to study some local questions in bifurcation theory. Subsequent chapters deal with the notion of monotone operators and monotonicity theory, a nonlinear version of the Hille-Yosida theorem, a version of the penalty method for the Navier-Stokes

equations and various types of weak solutions for minimizing problems in the spirit of duality theory for convex functionals This monograph will be of interest to students and practitioners in the field of mathematics who want to learn more about nonlinear functional analysis **Nigel Kalton's Lectures in Nonlinear Functional Analysis** Adam Bowers, 2024-10-02

The main theme of the book is the nonlinear geometry of Banach spaces and it considers various significant problems in the field The present book is a commented transcript of the notes of the graduate level topics course in nonlinear functional analysis given by the late Nigel Kalton in 2008 Nonlinear geometry of Banach spaces is a very active area of research with connections to theoretical computer science noncommutative geometry as well as geometric group theory Nigel Kalton was the most influential and prolific contributor to the theory Collected here are the topics that Nigel Kalton felt were significant for those first dipping a toe into the subject of nonlinear functional analysis and presents these topics in an accessible and concise manner As well as covering some well known topics it also includes recent results discovered by Kalton and his collaborators which have not previously appeared in textbook form A typical first year course in functional analysis will provide sufficient background for readers of this book **Geometric Nonlinear Functional Analysis** Yoav

Benyamini, Joram Lindenstrauss, 1998 This book presents a systematic and unified study of geometric nonlinear functional analysis This area has its classical roots in the beginning of the twentieth century and is now a very active research area having close connections to geometric measure theory probability classical analysis combinatorics and Banach space theory The main theme of the book is the study of uniformly continuous and Lipschitz functions between Banach spaces e.g. differentiability stability approximation existence of extensions fixed points etc This study leads naturally also to the classification of Banach spaces and of their important subsets mainly spheres in the uniform and Lipschitz categories Many recent rather deep theorems and delicate examples are included with complete and detailed proofs Challenging open problems are described and explained and promising new research directions are indicated **Nonlinear Functional**
