Miller, Janice Auyong, Nina P. Hadley, 2002

Marine Ecotourism Brian Garrod, Julie Wilson, 2003-01-03 Marine ecotourism is a major growth area within ecotourism itself a rapidly expanding area within tourism as a whole The activity has been attracting increasing attention both from the popular media and from professionals and academics with an interest in tourism s potential to contribute to sustainable development However there is a growing consensus that far too often the term has been used merely as a tool for capitalising on the good intentions of tourists without the industry itself having to make fundamental changes to their products or to the way they go about their operations This has often been to the detriment of local environments economies and host communities Yet the ideal of ecotourism as it is properly understood is to present local communities with a sustainable development alternative one that works to the benefit of local ecosystems local economies and local people The purpose of the first section of this book is therefore to introduce the concept of marine ecotourism and to draw out some of the key issues involved in ensuring that marine ecotourism is developed in a genuinely sustainable manner The second section then discusses some practical experiences of planning and managing marine ecotourism from around the world identifying common problems and discussing what might constitute good practice in addressing those problems **Whale-watching** James E. S. Higham, Lars Bejder, Rob Williams, 2014 Within little more than a generation whale watching has been subject to global industrial development It has been portrayed by destinations and business operators and advocated by environmental groups as a sustainable activity and an alternative to whaling However in recent years the sustainability of these activities has increasingly been questioned as research shows that repeated disturbance by boat traffic can severely disrupt critical behaviours of cetaceans in the wild Bringing together contributions by international experts this volume addresses complex issues associated with commercial whale watching sustainable development and conservation of the global marine environment It highlights widely expressed concerns for the failure of policy planning and management and pinpoints both long standing and emerging barriers to sustainable practice Featuring numerous case studies the book provides critical insights into the diverse socio cultural political economic and ecological contexts of this global industry highlighting the challenges and opportunities that arise along the pathways to sustainability *Marine Ecotourism* Carl Cater, Erlet Cater, 2007 Covering economic marketing planning and regulation issues this book also considers the vital role of marine ecotourism in raising awareness of the significance of the seas and oceans to sustainable coastal livelihoods

watching has been subject to global industrial development. It has been portrayed by destinations and business operators and advocated by environmental groups as a sustainable activity and an alternative to whaling. However, in recent years the sustainability of these activities has increasingly been questioned as research shows that repeated disturbance by boat traffic can severely disrupt critical behaviours of cetaceans in the wild. Bringing together contributions by international experts, this volume addresses complex issues associated with commercial whale watching, sustainable development and conservation of the global marine environment. It highlights widely expressed concerns for the failure of policy planning and management and pinpoints both long standing and emerging barriers to sustainable practice. Featuring numerous case studies, the book provides critical insights into the diverse socio cultural, political, economic and ecological contexts of this global industry, highlighting the challenges and opportunities that arise along the pathways to sustainability.

The Economic Contribution of Whalewatching to Regional Economies, 2000. Towards Sustainable Management of the Developing Dwarf Minke Whale Tourism Industry in Northern Queensland Peter W. Arnold, Alastair Birtles, 1999. *The current state and future prospects of whale-watching management* Christopher Duncan Malcolm, 2003. Commercial whale watching has become an important aspect of global marine tourism. Rapid expansion during the 1990s has created a yearly US 1 billion industry in which approximately 10 million people go whale watching in nearly 90 countries. While the economic importance of whale watching is well documented, there remain questions regarding ecological impacts on cetacean populations and the veracity of assumed educational benefits. These two problems call into question the label of ecotourism that is currently applied to whale watching. Due to the knowledge gap regarding the ecological impact of whale watching, science based management of the activity is difficult. In some areas, whale watching has become a vital aspect of the economy before managers have been able to participate in its development. In other areas, management has remained at arm's length, letting the industry grow without their participation. The objective of this dissertation is to critically review the current state of whale watching management and its link to maintenance of sustainable cetacean populations. Research is mainly focussed on whale watching in British Columbia, Canada. This dissertation is composed of three separate studies that examine different aspects of whale watching management: 1. an analysis of global whale watching protocols and a comparison of cetacean human versus terrestrial wildlife human interaction research; 2. a case study of the historical development, current state and future possibilities of whale watching management in B.C. where the activity has occurred since the early 1980s; and 3. a human dimensions case study of whale watchers in B.C. to assess the utility of social science research for whale watching.

management In the first study whale watching practices for 87 countries were examined Sixty one percent of countries where whale watching exists do not or appear to not possess established whale watching rules The presence and developmental extent of whale watching protocols is related to the number of whale watchers rate of increase during the 1990s and the number of years whale watching has existed in a given area The nature of existing whale watching protocols is extremely variable Minimum approach guidelines the most common type of practice show little relationship to size of the whale watching industry the general type of cetacean watched large whales or dolphins or the predominant activity of focal cetaceans breeding migration feeding The first study also compared cetacean human and terrestrial wildlife human research papers n 47 for each The cetacean human interaction research was more narrowly focussed made 20% more speculations was dependant on overt behaviours observable from the surface discussed limitations in only 7% of the studies and did not make use of comparison to terrestrial research Terrestrial wildlife human interaction research made more use of physiological measurements and experimental research which led to management recommendations in 86% of the papers To be more effective in the future cetacean human interaction research needs to make more use of the technology available to measure physiological reactions and employ experimental research designs more often In the second study federal provincial and whale watching industry documents personal interviews and participant observation were used to create a historical record for the development of the whale watching industry and its management in British Columbia This historical record was then analysed based on commons resource management theory to identify strengths and weaknesses of current management and explore requirements for successful future management Strengths identified were industry cooperation self regulation a unified voice forum in Southern Vancouver Island and a foundation for more effective management Weaknesses identified were the lack of biological purpose of whale watching guidelines and control of vessel behaviour Successful whale watching management in the future in B C is dependant on Fisheries and Oceans Canada entering into a co management type regime in which the experience and self regulation guidelines of the existing whale watching industry are taken into account in amendments to the Marine Mammal Regulations In the third study whale watchers in British Columbia were surveyed at the three main whale watching centres of Johnstone Strait Tofino and Victoria n 1617 Data was analysed for 1 expectations satisfactions attitudes and demographics between whale watching sites 2 attitudes between pre whale watching and post whale watching trip groups and 3 specialization in whale watchers between sites Johnstone Strait whale watchers were the most satisfied followed by Victoria then Tofino respondents Johnstone Strait whale watchers possessed greater previous cetacean education and whale watching experience and displayed the most concern for whale management and general resource management issues followed by Tofino then Victoria participants Although there were some significant differences in attitudes between pre and post trip groups it was unclear whether the interpretation aboard the whale watching vessels was responsible Whale watchers already displayed a high level of concern for cetacean and general

resource management issues before embarking on whale watching trips A specialization index was developed to classify whale watchers as Novice Intermediate Advance or Expert The index revealed that 81.6% of whale watchers were Novice or Intermediate indicating that whale watchers in B C are generalist type whalewatchers with little prior experience or knowledge Johnstone Strait attracted the most Advance and Expert whale watchers 34.9% followed by Tofino 14.1% and Victoria 9.4% There is a relationship between increase in percentage of specialized whalewatchers and increase in distance from urban tourism centres The study reveals that due to the dominance of generalist whale watchers in B C education needs to start with basic whale and marine ecology to develop a context on which to base more in depth conservation issues If whale watchers are to become part of the management solution education programs need to aim to develop a greater percentage of specialized whalewatchers From this study there are indications that whale watching could provide a basis for the sustainable management of cetaceans in the future However more research needs to be undertaken towards the development of science based management and the development of education programs In addition management also needs to take into account the efforts of established self regulated whale watching industries Currently whale watching management protocols are ad hoc inconsistent and are not based in science Minimum approach distances may not provide protection while researchers investigate the impact of vessel proximity to cetaceans therefore minimum approach distances are pseudo precautionary rather than precautionary Due to the questions that remain regarding ecological impact and educational benefits whale watching can not currently be considered ecotourism

Whenever human beings have looked out on the sea they have seen whales First from the shore and later from ships when humanity entered the ocean realm as seafarers we have responded to seeing these creatures with awe and wonder Even when we hunted whales a period well chronicled both in history and in literature the sight of a whale brought an adrenaline rush that was not totally linked to potential economic gain The first trips on boats specifically to watch rather than hunt whales began around 45 years ago in Southern California where the migrating gray whales seen in the distance from land drew vessels out for a closer look Since that time whalewatching has boomed currently conducted in over 40 countries around the world including Antarctica and estimated by economists at the Whale and Dolphin Conservation Society to have a 1999 worldwide economic value of around 800 million USD
