Expert Systems in Environmental Planning Jeff R. Wright, Lyna L. Wiggins, Ravinder K. Jain, T. John Kim, 2012-12-06. The connections between economics planning and the environment are receiving increased attention among scholars and policy makers in many countries. The common denominator among these three variables is the earth's life support systems: the ecosystems on which the world depends. When we describe our physical surroundings as a collection of possible uses, we are establishing linkages between economics planning and the environment. Because possible alternative uses compete with each other and conflicts arise over scarce land resources, the varying environmental impacts of alternative uses are major concerns for the current as well as the next generation. How to achieve sustainable development is the pressing question for today's environmental professionals. Environmental planners and engineers help us study the implications of our choices and new technologies and techniques that improve the practice of environmental planning should enhance our ability to protect our future. The depletion of the earth's natural resources and loss of biodiversity, the degradation of air, land, and water quality, the accumulation of greenhouse gases leading to changes in our climate, and the depletion of the ozone layer comprise only a partial list of environmental issues that concern our policy makers. To support their decisions, environmental planning must be a multidimensional and multidisciplinary activity that incorporates social, economic, political, geographical, and technical factors. Solutions for problems in these areas frequently require not only numerical analyses but also heuristic analyses which in turn depend on the intuitive judgements of planners and engineers.

Cochrane Handbook for Systematic Reviews of Interventions Julian P. T. Higgins, James Thomas, Jacqueline Chandler, Miranda Cumpston, Tianjing Li, Matthew J. Page, Vivian A. Welch, 2019-09-23. The revised edition of the Handbook offers the only guide on how to conduct report and maintain a Cochrane Review. The second edition of *The Cochrane Handbook for Systematic Reviews of Interventions* contains essential guidance for preparing and maintaining Cochrane Reviews of the effects of health interventions. Designed to be an accessible resource, the Handbook will also be of interest to anyone undertaking systematic reviews of interventions outside Cochrane and many of the principles and methods presented are appropriate for systematic reviews addressing research questions other than effects of interventions. This fully updated edition contains extensive new material on systematic review methods addressing a wide range of topics including network meta-analysis, equity, complex interventions, narrative synthesis, and automation. Also new to this edition, integrated throughout the Handbook, is the set of standards Cochrane expects its reviews to meet. Written for review authors, editors, trainers, and others with an interest in Cochrane Reviews, the second edition of *The Cochrane Handbook for Systematic Reviews of Interventions* continues to offer an invaluable resource for understanding the role of systematic reviews, critically appraising health research studies, and conducting reviews.

Crit - An Architectural Student's Handbook Charles Doidge, Rachel Sara, Rosie

Parnell, 2007-08-15 The architectural crit review or jury is a cornerstone of architectural education around the world. Students defend their ideas, drawings and models in open forum before staff and fellow students. What academic staff see as healthy creative debate, students see as hostile confrontation, an ego trip for staff and humiliation for them. This accessible and readable book, written by students and illustrated by telling cartoons, guides them through this academic minefield with creative humour. It provides practical advice based on experience of many recent students and draws on recent experimentation at Sheffield University and De Montfort University Leicester. The aim is twofold: first to suggest how to get the most out of the traditional experience and second to describe ways in which this is being developed into an experience that will be more constructive and prepare future students to build more creative relationships with clients and users and across the industry. While much has been written about the crit review or jury, little has been done to prepare students for it or to develop it in the light of changing professional attitudes and relationships. This book is a timely guide to a timeless experience in a changing profession.
