Topology Of Singular Spaces And Constructible Sheaves Monografie Matematyczne:

Topology of Singular Spaces and Constructible Sheaves Jörg Schürmann, 2012-12-06 Assuming that the reader is familiar with sheaf theory the book gives a self contained introduction to the theory of constructible sheaves related to many kinds of singular spaces such as cell complexes triangulated spaces semialgebraic and subanalytic sets complex algebraic or analytic sets stratified spaces and quotient spaces The relation to the underlying geometrical ideas are worked out in detail together with many applications to the topology of such spaces All chapters have their own detailed introduction containing the main results and definitions illustrated in simple terms by a number of examples The technical details of the proof are postponed to later sections since these are not needed for the applications *Singularity Theory* Denis Cheniot, Jean-Paul Brasselet, 2007 The Singularity School and Conference took place in Luminy Marseille from January 24th to February 25th 2005 More than 180 mathematicians from over 30 countries converged to discuss recent developments in singularity theory The volume contains the elementary and advanced courses conducted by singularities specialists during the conference general lectures on singularity theory and lectures on applications of the theory to various domains The subjects range from geometry and topology of singularities through real and complex singularities to applications of singularities *Singularity Theory: Dedicated To Jean-paul Brasselet On His 60th Birthday - Proceedings Of The 2005 Marseille Singularity School And Conference* Jean-paul Brasselet, Denis Cheniot, Nicolas Dutertre, Claudio Murolo, Anne Pichon, David Trotman, 2007-02-08 The Singularity School and Conference took place in Luminy Marseille from January 24th to February 25th 2005 More than 180 mathematicians from over 30 countries converged to discuss recent developments in singularity theory The volume contains the elementary and advanced courses conducted by singularities specialists during the conference general lectures on singularity theory and lectures on applications of the theory to various domains The subjects range from geometry and topology of singularities through real and complex singularities to applications of singularities **Projective Geometry and Formal Geometry** Lucian Badescu, 2012-12-06 The aim of this monograph is to introduce the reader to modern methods of projective geometry involving certain techniques of formal geometry Some of these methods are illustrated in the first part through the proofs of a number of results of a rather classical flavor involving in a crucial way the first infinitesimal neighbourhood of a given subvariety in an ambient variety Motivated by the first part in the second formal functions on the formal completion X_Y of X along a closed subvariety Y are studied particularly the extension problem of formal functions to rational functions The formal scheme X_Y introduced to algebraic geometry by Zariski and Grothendieck in the 1950s is an analogue of the concept of a tubular neighbourhood of a submanifold of a complex manifold It is very well suited to study the given embedding $Y \subset X$ The deep relationship of formal geometry with the most important connectivity theorems in algebraic geometry or with complex geometry is also studied Some of the formal methods are illustrated and applied to homogeneous spaces The book contains a lot of results obtained over the last thirty years many of which never appeared in a

monograph or textbook It addresses to algebraic geometers as well as to those interested in using methods of algebraic geometry *Dynamics of Foliations, Groups and Pseudogroups* Pawel Walczak, 2012-12-06 Foliations groups and pseudogroups are objects which are closely related via the notion of holonomy In the 1980s they became considered as general dynamical systems This book deals with their dynamics Since dynamics is a very extensive term we focus on some of its aspects only Roughly speaking we concentrate on notions and results related to different ways of measuring complexity of the systems under consideration More precisely we deal with different types of growth entropies and dimensions of limiting objects Invented in the 1980s by E Ghys R Langevin and the author geometric entropy of a foliation is the principal object of interest among all of them Throughout the book the reader will find a good number of inspiring problems related to the topics covered **The Novikov Conjecture** Matthias Kreck, Wolfgang Lück, 2004-11-22 These lecture notes contain a guided tour to the Novikov Conjecture and related conjectures due to Baum Connes Borel and Farrell Jones They begin with basics about higher signatures Whitehead torsion and the s Cobordism Theorem Then an introduction to surgery theory and a version of the assembly map is presented Using the solution of the Novikov conjecture for special groups some applications to the classification of low dimensional manifolds are given *Compositio Mathematica* ,2008 **Mathematical Reviews** ,2005-06 *American Book Publishing Record* ,2004 *Octogon Mathematical Magazine* ,2004 **Deutsche Nationalbibliographie und Bibliographie der im Ausland erschienenen deutschsprachigen Veröffentlichungen** ,2007 **Topology of Singular Spaces and Constructible Sheaves** Jörg Schürmann, 2003 *Sheaves in Topology* Alexandru Dimca, 2004-03-12 Constructible and perverse sheaves are the algebraic counterpart of the decomposition of a singular space into smooth manifolds This introduction to the subject can be regarded as a textbook on modern algebraic topology treating the cohomology of spaces with sheaf as opposed to constant coefficients The author helps readers progress quickly from the basic theory to current research questions thoroughly supported along the way by examples and exercises *Topology of Stratified Spaces* Greg Friedman, 2011-03-28 This book explores the study of singular spaces using techniques from areas within geometry and topology and the interactions among them **Topological Invariants of Stratified Spaces** Markus Banagl, 2007-01-09 The central theme of this book is the restoration of Poincaré duality on stratified singular spaces by using Verdier self dual sheaves such as the prototypical intersection chain sheaf on a complex variety Highlights include complete and detailed proofs of decomposition theorems for self dual sheaves explanation of methods for computing twisted characteristic classes and an introduction to the author's theory of non Witt spaces and Lagrangian structures *Handbook of Geometry and Topology of Singularities III* José Luis Cisneros-Molina, Lê Dũng Tráng, José Seade, 2023-06-08 This is the third volume of the Handbook of Geometry and Topology of Singularities a series which aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research This volume consists of ten chapters which provide an in depth and reader friendly survey of various

important aspects of singularity theory Some of these complement topics previously explored in volumes I and II such as for instance Zariski's equisingularity the interplay between isolated complex surface singularities and 3 manifold theory stratified Morse theory constructible sheaves the topology of the non critical levels of holomorphic functions and intersection cohomology Other chapters bring in new subjects such as the Thom-Mather theory for maps characteristic classes for singular varieties mixed Hodge structures residues in complex analytic varieties nearby and vanishing cycles and more Singularities are ubiquitous in mathematics and science in general Singularity theory interacts energetically with the rest of mathematics acting as a crucible where different types of mathematical problems interact surprising connections are born and simple questions lead to ideas which resonate in other parts of the subject and in other subjects Authored by world experts the various contributions deal with both classical material and modern developments covering a wide range of topics which are linked to each other in fundamental ways The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook

Handbook of Geometry and Topology of Singularities IV José Luis Cisneros-Molina, Lê Dũng Tráng, José Seade, 2023-10-07 This is the fourth volume of the Handbook of Geometry and Topology of Singularities a series that aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research This volume consists of twelve chapters which provide an in depth and reader friendly survey of various important aspects of singularity theory Some of these complement topics previously explored in volumes I to III Amongst the topics studied in this volume are the Nash blow up the space of arcs in algebraic varieties determinantal singularities Lipschitz geometry indices of vector fields and 1 forms motivic characteristic classes the Hilbert-Samuel multiplicity and comparison theorems that spring from the classical De Rham complex Singularities are ubiquitous in mathematics and science in general Singularity theory is a crucible where different types of mathematical problems interact surprising connections are born and simple questions lead to ideas which resonate in other subjects Authored by world experts the various contributions deal with both classical material and modern developments covering a wide range of topics which are linked to each other in fundamental ways The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook

Constructible Sets in Real Geometry Carlos Andradas,Ludwig Bröcker,Jesus M. Ruiz,1996-05-23 This book presents a systematic and unified report on the minimal description of constructible sets It starts at a very basic level in book form for the very first time The book contains numerous examples and each chapter ends with a section containing historical notes

Singularities in Geometry, Topology, Foliations and Dynamics José Luis Cisneros-Molina,Dũng Tráng Lê,Mutsuo Oka,Jawad Snoussi,2017-02-13 This book features state of the art research on singularities in geometry topology foliations and dynamics and provides an overview of the current state of singularity theory in these settings Singularity theory is at the crossroad of various branches of mathematics and science in general In recent years there have been remarkable developments both in the theory itself and in its relations with other areas The contributions in this volume originate from the Workshop on Singularities in Geometry Topology Foliations and Dynamics held in Merida Mexico in December 2014 in celebration of Jos Seade s 60th Birthday It is intended for researchers and graduate students interested in singularity theory and its impact on other fields
