Toxins And Hemostasis From Bench To Bedside:

Toxins and Hemostasis R. Manjunatha Kini, Kenneth J Clemetson, Francis S. Markland, Mary Ann McLane, Takashi Morita, 2010-10-19 Circulation of blood is vital for the survival of vertebrates including man. Mainly it plays an important role in carrying food nutrients and oxygen to every tissue and organ and in removing all waste products and carbon dioxide. Any imbalance in the hemostatic and cardiovascular systems can lead to death and severe debility. A number of animals have developed mechanisms to target these systems and exploit the vulnerability. In some species, for example snakes, such mechanisms are used to immobilize and kill the victim prey, whereas in others, for example insects such as leeches, mosquitoes, and ticks, they are used to provide a continuous supply of blood. These mechanisms include but are not limited to procoagulant and anticoagulant actions that affect the coagulation cascade and platelet aggregation as well as altering vasodilatory responses. In all these various animals, these mechanisms have evolved to perfection over millions of years to support their survival. In last 3-4 decades, due to the efforts of scientists from various backgrounds including biology, protein chemistry, molecular biology, pharmacology, hematology, and structural biology, significant progress in understanding the structure-function relationships as well as the mechanism of action have been made in a number of exogenous factors that affect blood coagulation, platelet aggregation, and vasodilation from various animals. These exogenous factors have contributed significantly to the development of research tools as well as providing new therapeutic agents. With the increase in average age of the population coupled with changes in life style in recent years, there has been a significant increase in cardiovascular and hematological disorders. Thus, scientists in both academic institutions as well as the pharmaceutical industry are developing better therapeutic agents to improve the quality of life. This impetus has led to the search for novel agents from various sources that interfere with cardiovascular and hematological processes. Although at first glance, exogenous factors appear to function as villains, several life-saving drugs have been developed based upon these factors. Such drugs or drug leads include those that inhibit the angiotensin converting enzymes, Captopril and Enalapril that block platelet receptors, Eptifibatide and Tirofiban, or that digest thrombotic plugs, Alvimoprase and bat plasminogen activator, to name a few. Several new and exciting success stories are currently unfolding. In this book, recent studies on some of the exogenous factors that play crucial roles in cardiovascular and hematological disorders are reviewed in order to consolidate the efforts in this area of research and to recruit new talented researchers. The 25-30 review chapters, each written by experts in their field, compiled herein are devoted to exogenous factors affecting platelet aggregation, anticoagulant and procoagulant proteins, fibrinolytic proteins, and hypotensive agents. For details, see Contents of the Book. This book is intended to help to create elevated awareness and enthusiasm in the field of exogenous factors. I believe that this book will provide greater impetus to the search for novel proteins based on naturally occurring exogenous factors. This will be the first book dealing extensively with exogenous factors in the last 25 years. The book will provide a ready reference to the different approaches used to solve

complex problems in protein chemistry and pharmacology of exogenous factors The book will update our understanding of the structure function relationships and mechanisms of action of exogenous factors and provide great insights into future directions for solving the remaining challenges Transfusion Medicine and Hemostasis Beth H. Shaz, Christopher D. Hillyer, Joseph (Yossi) Schwartz, Morayma Reyes Gil, 2024-11-16 Transfusion Medicine and Hemostasis Fourth Edition continues to be the only pocket size quick reference for pathology and transfusion medicine for residents and fellows It s helpful to all physicians and allied health professionals who order and administer blood components cellular therapies and specialized factors for hemostatic abnormalities who order coagulation testing and those who consult and care for these often very ill patients The book is ideal for pathology medicine surgery and anesthesia residents transfusion hematology and anesthesia fellows and certified and specialized practitioners as well as medical technologist in transfusion cellular therapy hematology and coagulation The new edition covers the many new developments that have occurred since the previous edition to include new blood products new indications or clinical conditions in which blood products are used Similarly new hemostasis testing is introduced as well as new clinical scenarios due the COVID 19 pandemic relevant to Hemostasis Transfusion Medicine This includes COVID coagulopathy Vaccine Induced Thrombotic Immune Thrombocytopenia Pediatric reference range in coagulation testing Platelet rich plasma and MNC products CAR T cells Includes COVID 19 coagulopathy and Vaccine Induced Thrombotic Immune N94 Thrombocytopenia Provides all information regarding the clinical and laboratory aspects of Transfusion Medicine and Hemostasis in one place Presents user friendly up to date information in a book that can be carried around either to the lab or bedside **Snake Venom Metalloproteinases** Jay Fox, José María Gutiérrez, 2018-07-10 This book is a printed edition of the Special Issue Snake Venom Metalloproteinases that was published in Toxins **Natural Poisons and Venoms** Jan-Peter Hildebrandt, Eberhard Teuscher, Ulrike Lindequist, 2023-07-04 Biogenic toxins are fascinating natural products characterized by an enormous diversity of chemical structures and pharmacological activities They not only pose hazards to humans and animals but they are important components in the interplay of substances and living beings in nature and moreover important sources for new drugs Numerous images of plants and chemical structural formulas complete the book as well as extensive references for further reading The multivolume reference is an essential resource for physicians veterinarians pharmacists chemists biochemists food chemists and biologists for students in the relevant fields and maybe for interested laymen All aspects of natural toxins based on the latest scientific knowledge are included All aspects of the toxicology of all living organisms and natural foods chemistry action mechanisms symptoms of intoxications The only book arranged on a strictly scientific base according to the biogenetic origin and chemical structure Natural Poisons and Venoms in 5 Volumes Volume 1 Plant Toxins Terpenes and Steroids 2023 ISBN 978 3 11 072472 1 Volume 2 Plant Toxins Polyketides Phenylpropanoids and Further Compounds 2024 ISBN 978 3 11 072851 4 Volume 3 Plant Toxins Alkaloids and Lectins 2025 ISBN 978 3 11 112740 8 Volume 5 Fungal and Microbial Toxins
