Wavelet Subdivision Surfaces Charles Chui, Qintang Jiang, 2014-11-26 With the use of bivariate wavelets the applications of wavelets to surface subdivision methods becomes much more powerful than the use of biorthogonal wavelets This book illustrates how symmetry can be used to improve surface visual quality and how the matrix valued surface subdivision stencils that are included allow for the prediction of tangent planes and unit surface from the coarse control net The text offers an up to date rigorous treatment of wavelet and frame based surface multi resolution

theory algorithms and methods together with matrix valued and conventional surface subdivision schemes integrated in a unified wavelet subdivision mathematics toolbox *Rendering Curves and Surfaces with Hybrid Subdivision and Forward Differencing* International Business Machines Corporation. Research Division,A. Rappoport,1990 **Wavelets, Images, and Surface Fitting** Pierre-Jean Laurent,Alain Le Méhauté,Larry Schumaker,1994-07-15 This volume documents the results and presentations relating to the use of wavelet theory and other methods in surface fitting and image reconstruction of the Second International Conference on Curves and Surfaces held in Chamonix in 1993 The papers represent directions for future research and development in many areas of application **An Adaptive Subdivision Method with Crack Prevention for Rendering Beta-spline Objects** University of California, Berkeley. Computer Science Division,Brian A. Barsky,Tony D. DeRose,Mark D. Dippe,1987 Adaptive subdivision is a method of creating polygonal approximations to spline surfaces An adaptive subdivision algorithm takes an input a spline surface and a tolerance epsilon and outputs a piecewise planar approximation to the surface that is guaranteed to differ from the actual surface by a distance no greater than epsilon These algorithms proceed by recursively splitting the surface into smaller subsurfaces ultimately approximating subsurfaces with planar polyhedra These algorithms are therefore characterized by the mathematics behind the splitting of a surface the test that is used to determine when to stop the recursion and the method by which a subsurface is approximated by polyhedra Algorithms of this type are currently known for spline techniques such as Bezier and B splines This paper describes the Beta spline curve and surface technique and derive the equations governing the splitting of Beta spline curves and surfaces It presents a very general adaptive subdivision algorithm that can be used with a variety of surface techniques It incorporates splitting criteria based on flatness and prevents cracks from occurring between approximating polyhedra The tolerance controlling the splitting process may itself be adaptive so that as an object moves farther away the tolerance is automatically increased **Wavelet Methods for Curve and Surface Estimation** David Richard Mark Herrick,2000
