Theory and Observation in Ancient and Medieval Astronomy Bernard R. Goldstein,1985 **Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures** Helaine Selin,1997-07-31 The Encyclopaedia fills a gap in both the history of science and in cultural studies Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a translator of Greek scientific works The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures science Our aim is not to claim the superiority of other cultures but to engage in a mutual exchange of ideas The Western academic divisions of science technology and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected This work contributes to redressing the balance in the number of reference works devoted to the study of Western science and encourages awareness of cultural diversity The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does xi

Ancient Astronomical Observations and the Study of the Moon's Motion (1691-1757) John M. Steele,2012-02-17 The discovery of a gradual acceleration in the moon's mean motion by Edmond Halley in the last decade of the seventeenth century led to a revival of interest in reports of astronomical observations from antiquity These observations provided the only means to study the moon's secular acceleration as this newly discovered acceleration became known This book contains the first detailed study of the use of ancient and medieval astronomical observations in order to investigate the moon's secular acceleration from its discovery by Halley to the establishment of the magnitude of the acceleration by Richard Dunthorne Tobias Mayer and Jérôme Lalande in the 1740s and 1750s Making extensive use of previously unstudied manuscripts this work shows how different astronomers used the same small body of preserved ancient observations in different ways in their work on the secular acceleration In addition this work looks at the wider context of the study of the moon's secular acceleration including its use in debates of biblical chronology whether the heavens were made up of ether and the use of astronomy in determining geographical longitude It also discusses wider issues of the perceptions and knowledge of ancient and medieval astronomy in the early modern period This book will be of interest to historians of astronomy astronomers and historians of the ancient world

Between Copernicus and Galileo James M. Lattis,2010-12-15 *Between Copernicus and Galileo* is the story of Christoph Clavius the Jesuit astronomer and teacher whose work helped set the standards by which Galileo's famous claims appeared so radical and whose teachings guided the intellectual and scientific agenda of the Church in the central years of the Scientific Revolution Though relatively unknown today Clavius was

enormously influential throughout Europe in the late sixteenth and early seventeenth centuries through his astronomy books the standard texts used in many colleges and universities and the tools with which Descartes Gassendi and Mersenne among many others learned their astronomy James Lattis uses Clavius's own publications as well as archival materials to trace the central role Clavius played in integrating traditional Ptolemaic astronomy and Aristotelian natural philosophy into an orthodox cosmology Although Clavius strongly resisted the new cosmologies of Copernicus and Tycho Galileo's invention of the telescope ultimately eroded the Ptolemaic world view By tracing Clavius's views from medieval cosmology the seventeenth century Lattis illuminates the conceptual shift from Ptolemaic to Copernican astronomy and the social intellectual and theological impact of the Scientific Revolution [Studies on Gersonides](#) Gad Freudenthal,2023-11-27 R Levi ben Gershom Gersonides 1288 1344 is one of the greatest and most original figures of Medieval Jewish thought He wrote numerous works in philosophy science and biblical exegesis Some of his scientific works most notably his highly innovative Astronomy were translated from Hebrew into Latin and could thus reach non Jewish scholars The twelve studies collected in this bilingual volume English and French in equal parts offer for the first time a comprehensive overview and assessment of Gersonides work in astronomy mathematics logic natural science and psychology Gersonides contributions are analyzed within the context of contemporary philosophy and science in Hebrew Arabic and Latin New light is also shed on the reception of Gersonides work within European science The volume includes a very extensive bibliography of writings by and about Gersonides From the contents Part I Gersonides Astronomy Bernard R Goldstein Jos Luis Mancha Jos Chabas Henri Hugonnard Roche Guy Beaujouan Part II Gersonides Work in Mathematics Tony L vy Karine Chemla Serge Pahaut Part III Gersonides Science in Its Relations to His Philosophy and Theology Herbert A Davidson Tzvi Y Langermann Charles H Manekin Amos Funkenstein Gad Freudenthal **Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures** Helaine Selin,2008-03-12 Here at last is the massively updated and augmented second edition of this landmark encyclopedia It contains approximately 1000 entries dealing in depth with the history of the scientific technological and medical accomplishments of cultures outside of the United States and Europe The entries consist of fully updated articles together with hundreds of entirely new topics This unique reference work includes intercultural articles on broad topics such as mathematics and astronomy as well as thoughtful philosophical articles on concepts and ideas related to the study of non Western Science such as rationality objectivity and method You ll also find material on religion and science East and West and magic and science **Cometary Theory in Fifteenth-Century Europe** Jane L. Jervis,1985-10-31 *A Survey of European Astronomical Tables in the Late Middle Ages* José Chabás, Bernard R. Goldstein,2012-05-31 *A Survey of European Astronomical Tables in the Late Middle Ages* is a first attempt to classify and illustrate the numerous astronomical tables compiled from about the 10th century to the early 16th century in the Latin West The compilation of astronomical tables was a major and dynamic intellectual enterprise These tables respond to a wide variety of astronomical problems and

computational needs and contain a large number of ingenious solutions proposed by astronomers over the centuries In the absence of algebraic notation and mathematical graphing techniques a table was often the best way to transmit precise information to the reader Indeed an astronomical table is not a just a list of data but a structured way to present numerical information of astronomical interest the whole book which is an excellent guide for all those who are interested in the history of medieval European astronomy and especially in medieval astronomical tables Julio Sams University of Barcelona

Judaism and the Doctrine of Creation Norbert M. Samuelson,1994-11-24 The topic of this book is creation It breaks down into discussions of two distinct but interrelated questions what does the universe look like and what is its origin The opinions about creation considered by Norbert Samuelson come from the Hebrew scriptures Greek philosophy Jewish philosophy and contemporary physics His perspective is Jewish liberal and philosophical It is Jewish because the foundation of the discussion is biblical texts interpreted in the light of traditional rabbinic texts It is philosophical because the subject matter is important in both past and present philosophical texts and to Jewish philosophy in particular Finally it is liberal because the authorities consulted include heterodox as well as orthodox Jewish sources The ensuing discussion leads to original conclusions about a diversity of topics including the limits of human reason and religious faith and the relevance of scientific models to religious doctrine Jewish Translation History Robert Singerman,2002-11-29 A classified bibliographic resource for tracing the history of Jewish translation activity from the Middle Ages to the present day providing the researcher with over a thousand entries devoted solely to the Jewish role in the east to west transmission of Greek and Arab learning and science into Latin or Hebrew Other major sections extend the coverage to modern times taking special note of the absorption of European literature into the Jewish cultural orbit via Hebrew Yiddish or Judezmo translations for instance or the translation and reception of Jewish literature written in Jewish languages into other languages such as Arabic English French German or Russian This polyglot bibliography the first of its kind contains over 2 600 entries is enhanced by a vast number of additional bibliographic notes leading to reviews and related resources and is accompanied by both an author and a subject index **History of Jewish Philosophy** Daniel Frank,Oliver Leaman,2005-10-20 Jewish philosophy is often presented as an addendum to Jewish religion rather than as a rich and varied tradition in its own right but the History of Jewish Philosophy explores the entire scope and variety of Jewish philosophy from philosophical interpretations of the Bible right up to contemporary Jewish feminist and postmodernist thought The links between Jewish philosophy and its wider cultural context are stressed building up a comprehensive and historically sensitive view of Jewish philosophy and its place in the development of philosophy as a whole Includes Detailed discussions of the most important Jewish philosophers and philosophical movements Descriptions of the social and cultural contexts in which Jewish philosophical thought developed throughout the centuries Contributions by 35 leading scholars in the field from Britain Canada Israel and the US Detailed and extensive bibliographies In Synchrony with the Heavens, Volume 1 Call of the Muezzin David King,2004-02-01 This is

the first investigation of one of the main interests of astronomy in Islamic civilization namely timekeeping by the sun and stars and the regulation of the astronomically defined times of Muslim prayer The study is based on over 500 medieval astronomical manuscripts first identified by the author now preserved in libraries all over the world and originally from the entire Islamic world from the Maghrib to Central Asia and the Yemen The materials presented provide new insights into the early development of the prayer ritual in Islam They also call into question the popular notion that religion could not inspire serious scientific activity Only one of the hundreds of astronomical tables discussed here was known in medieval Europe which is one reason why the entire corpus has remained unknown until the present A second volume also to be published by Brill deals with astronomical instruments for timekeeping and other computing devices

The History of Ptolemy's Star Catalogue Gerd Graßhoff, 2013-03-07 Ptolemy's Almagest shares with Euclid's Elements the glory of being the scientific text longest in use From its conception in the second century up to the late Renaissance this work determined astronomy as a science During this time the Almagest was not only a work on astronomy the subject was defined as what is described in the Almagest The cautious emancipation of the late middle ages and the revolutionary creation of the new science in the 16th century are not conceivable without reference to the Almagest This text lifted European astronomy to the high standard of knowledge on which the new science flourished Before the Ptolemaic models of the orbits of the sun the moon and the planets had been refined by Arabic astronomers They provided the structural elements with which Copernicus and Kepler ushered in the era of modern astronomy The Almagest survived the destruction of its epicyclic representation of the planetary orbits in the conceptual traces left behind in the theories of its successors The clear separation of the sidereal from the tropical year the celestial coordinate systems the concepts of time the forms of the constellations and brightness classifications of celestial objects are among many other things still part of the astronomical canon even today

De Visione Stellarum Dan Burton, 2007 In this critical edition of Nicole Oresme's 14th century treatise on atmospheric refraction Oresme uses optics and infinitesimals to help solve this vexing problem of astronomy proposing that light travels along a curve through the atmosphere centuries before Hooke and Newton
