Shammass, 2007-11-10 The past thirty years have witnessed a growing worldwide desire that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken

Protein Conformational Dynamics Ke-li Han, Xin Zhang, Ming-jun Yang, 2014-01-20 This book discusses how biological molecules exert their function and regulate biological processes with a clear focus on how conformational dynamics of proteins are critical in this respect In the last decade the advancements in computational biology nuclear magnetic resonance including paramagnetic relaxation enhancement and fluorescence based ensemble single molecule techniques have shown that biological molecules proteins DNAs and RNAs fluctuate under equilibrium conditions The conformational

and energetic spaces that these fluctuations explore likely contain active conformations that are critical for their function. More interestingly, these fluctuations can respond actively to external cues which introduces layers of tight regulation on the biological processes that they dictate. A growing number of studies have suggested that conformational dynamics of proteins govern their role in regulating biological functions; examples of this regulation can be found in signal transduction, molecular recognition, apoptosis, protein ion, other molecules translocation, and gene expression. On the experimental side, the technical advances have offered deep insights into the conformational motions of a number of proteins. These studies greatly enrich our knowledge of the interplay between structure and function. On the theoretical side, novel approaches and detailed computational simulations have provided powerful tools in the study of enzyme catalysis, protein drug design, protein ion, other molecule translocation, and protein folding aggregation, to name but a few. This work contains detailed information not only on the conformational motions of biological systems but also on the potential governing forces of conformational dynamics, transient interactions, chemical and physical origins, thermodynamic properties. New developments in computational simulations will greatly enhance our understanding of how these molecules function in various biological events.

IDIHOM: Industrialization of High-Order Methods - A Top-Down Approach Norbert Kroll, Charles Hirsch, Francesco Bassi, Craig Johnston, Koen Hillewaert, 2015-01-02. The book describes the main findings of the EU funded project IDIHOME: Industrialization of High Order Methods. A Top Down Approach. The goal of this project was the improvement, utilization, and demonstration of innovative higher order simulation capabilities for large scale aerodynamic application challenges in the aircraft industry. The IDIHOME consortium consisted of 21 organizations including aircraft manufacturers, software vendors, as well as the major European research establishments and several universities, all of them with proven expertise in the field of computational fluid dynamics. After a general introduction to the project, the book reports on new approaches for curved boundary grid generation, high order solution methods, and visualization techniques. It summarizes the achievements, weaknesses, and perspectives of the new simulation capabilities developed by the project partners for various industrial applications and includes internal and external aerodynamic as well as multidisciplinary test cases.

Soil-Subsurface Change Bruno Yaron, Ishai Dror, Brian Berkowitz, 2012-02-15. This book combines soil science, earth science, and environmental geochemistry, providing comprehensive background information for specialists interested in chemical induced changes in the soil subsurface system. Readers are introduced to the chemistry of contaminants that often disturb the natural soil subsurface equilibrium as a result of human activity. While the soil subsurface system has in many cases been affected by human impact, the effects of chemical contaminants on the actual matrix and properties have been largely neglected. The major focus of the book is on changes to the soil subsurface matrix and properties caused by chemical

pollution By integrating results available in the literature we observe that chemical pollutants may lead to the irreversible formation of a new soil subsurface regime characterized by a matrix and properties different than those of the natural regime In contrast to the geological time scales dictating natural changes to the matrix and properties of the soil subsurface system the time scale associated with chemical pollutant induced changes is far shorter and extends over a human lifetime scale The numerous examples presented in the book confirm that chemical contamination should be considered as an additional factor in the formation of a contemporary soil subsurface regime that is different than that of the pristine system
