Ubuntu Mobile Guide:

The Green IT Guide Mike Halsey, 2025-02-10 Make your IT systems the solution to climate change rather than the cause. More and more we're relying on an ever-increasing number of different computer types and services: powerful smartphones and cloud data centers. All of this carries with it a carbon footprint and a negative impact on the environment and your business or organization will come under increasing scrutiny and criticism from customers, stakeholders and governments. It doesn't have to be this way though, and with the right information, some careful planning and the sensible use of different technologies, you could be helping both the planet and people worldwide and in your local communities. With this guide, author Mike Halsey gives you the information you need to head towards a sustainable carbon neutral or even carbon negative future. This second edition discusses the impact of the latest technologies including SoC System on a Chip PCs and artificial intelligence AI. It details how these technologies can help your business achieve its climate goals and what challenges are involved, especially with the enormous power consumption of AI in the cloud. Additionally, this edition includes how regulation both nationally and internationally affects you and how your business can become compliant and maintain high standards of sustainability into the future. It looks at the current uncertain state of the world and how this can affect the cloud IT supply chains, security, regulation, compliance and business sustainability. What You Will Learn: Choose sustainable IT equipment. Find the most environmentally friendly cloud and business services. Know how community and national and international projects can help you become more sustainable. Consider what roles artificial intelligence AI and regulation play in business sustainability. Look at the latest and future technologies to take your business towards carbon neutrality. IT professionals who want to find effective strategies for bringing their company in line with existing and forthcoming environmental standards and regulations and individual power users who are keen to reduce the carbon footprint of their own IT systems.
