Current Trends In Theoretical Computer Science - Entering The 21st Century Gheorghe Paun, Grzegorz

Rozenberg, Arto Salomaa, 2001-02-12 The scientific developments at the end of the past millennium were dominated by the huge increase and diversity of disciplines with the common label computer science The theoretical foundations of such disciplines have become known as theoretical computer science This book highlights some key issues of theoretical computer science as they seem to us now at the beginning of the new millennium The text is based on columns and tutorials published

in the Bulletin of the European Association for Theoretical Computer Science in the period 1995-2000. The columnists themselves selected the material they wanted for the book and the editors had a chance to update their work. Indeed, much of the material presented here appears in a form quite different from the original. Since the presentation of most of the articles is reader friendly and does not presuppose much knowledge of the area, the book constitutes suitable supplementary reading material for various courses in computer science.

Mathematical Logic and Theoretical Computer Science David Kueker, 2020-12-22. Mathematical Logic and Theoretical Computer Science covers various topics ranging from recursion theory to Zariski topoi. Leading international authorities discuss selected topics in a number of areas including denotational semantics, recursion theoretic aspects of computer science, model theory and algebra, Automath and automated reasoning, stability theory, topoi and mathematics and topoi and logic. The most up to date review available in its field. Mathematical Logic and Theoretical Computer Science will be of interest to mathematical logicians, computer scientists, algebraists, algebraic geometers, differential geometers, differential topologists and graduate students in mathematics and computer science.

Theoretical Aspects of Computer Science Gholamreza B. Khosrovshahi, Ali Shokoufandeh, Amin Shokrollahi, 2003-07-31. This book presents the revised final versions of eight lectures given by leading researchers at the First Summer School on Theoretical Aspects of Computer Science in Tehran, Iran, in July 2000. The lectures presented are devoted to quantum computation, approximation algorithms, self-testing, correction, algebraic modeling of data, the regularity lemma, multiple access communication and combinatorial designs, graph theoretical methods in computer vision and low density parity check codes.

Machines, Computations, and Universality Maurice Margenstern, 2005-02-25. This book constitutes the thoroughly refereed postproceedings of the 4th International Conference on Machines, Computations and Universality (MCU 2004) held in St. Petersburg, Russia, in September 2004. The 21 revised full papers presented together with 5 invited papers went through two rounds of reviewing, selection and improvement. A broad variety of foundational aspects in theoretical computer science are addressed, such as cellular automata, molecular computing, quantum computing, formal languages, automata theory, Turing machines, P systems, etc.

The Development of Computer Science: A Sociocultural Perspective Matti Tedre, 2006.

Dependable Software Systems Engineering J. Esparza, O. Grumberg, S. Sickert, 2016-04-19. In the last few years we have all become daily users of Internet banking, social networks and cloud services. Preventing malfunctions in these services and protecting the integrity of private data from cyber attack are both current preoccupations of society at large. While modern technologies have dramatically improved the quality of software, the computer science community continues to address the problems of security by developing a theory of formal verification, a body of methodologies, algorithms and software tools for finding and eliminating bugs and security hazards. This book presents lectures delivered at the NATO Advanced Study Institute (ASI) School Marktoberdorf 2015: Verification and Synthesis of Correct and Secure Systems. During this two-week summer school held in Marktoberdorf, Germany, in August 2015, the

lecturers provided a comprehensive view of the current state of the art in a large variety of subjects including models and techniques for analyzing security protocols parameterized verification synthesis of reactive systems software model checking composition checking programming by examples verification of current software two player zero sum games played on graphs software security by information flow equivalents combinatorics and analysis of synthesis with Big Code The Marktoberdorf ASIs have become a high level scientific nucleus of the international scientific network on formal methods and one of the major international computer science summer schools This book will be of interest to all those seeking an overview of current theories and applications in formal verification and security

Mathematical Foundations of Computer Science 2004 Jirí Fiala, Václav Koubek, Jan Kratochvíl, 2004-08-06 This volume contains the papers presented at the 29th Symposium on Mathematical Foundations of Computer Science MFCS 2004 held in Prague Czech Republic August 22-27 2004 The conference was organized by the Institute for Theoretical Computer Science ITI and the Department of Theoretical Computer Science and Mathematical Logic KTIML of the Faculty of Mathematics and Physics of Charles University in Prague It was supported in part by the European Association for Theoretical Computer Science EATCS and the European Research Consortium for Informatics and Mathematics ERCIM Traditionally the MFCS symposia encourage high quality research in all branches of theoretical computer science Ranging in scope from automata formal languages data structures algorithms and computational geometry to complexity theory models of computation and applications including computational biology cryptography security and artificial intelligence the conference offers a unique opportunity to researchers from diverse areas to meet and present their results to a general audience The scientific program of this year's MFCS took place in the lecture halls of the recently reconstructed building of the Faculty of Mathematics and Physics in the historical center of Prague with the famous Prague Castle and other celebrated historical monuments in sight The view from the windows was a challenging competition for the speakers in the fight for the attention of the audience But we did not fear the result Due to the unusually tough competition for this year's MFCS the admitted presentations certainly attracted considerable interest The conference program and the proceedings consisted of 60 contributed papers selected by the Program Committee from a total of 167 submissions

Graph-Theoretic Concepts in Computer Science Hans L. Bodlaender, 2003-10-27 The 29th International Workshop on Graph Theoretic Concepts in Computer Science WG2003 was held in the Mennorode conference center in Elspeet The Netherlands The workshop was organized by the Center for Algorithmic Systems of the Institute of Information and Computing Sciences of Utrecht University The workshop took place June 19-21 2003 The 72 participants of WG 2003 came from universities and research institutes from 18 different countries and five different continents The workshop looks back at a long tradition It was first held in 1975 and has been held 20 times in Germany twice in Austria and once in Italy Slovakia Switzerland and the Czech Republic and has now been held for the third time in The Netherlands The workshop aims at uniting theory and practice by demonstrating how graph theoretic concepts can be applied to various areas in

computerscience or by extracting new problems from applications. It is devoted to the theoretical and practical aspects of graph concepts in computer science. The goal is to present recent research results and to identify and explore directions of future research. The talks given at the workshop showed how recent research results from algorithmic graph theory can be used in computer science and which graph theoretic questions arise from new developments in computer science. Automata, Languages and Programming Andrzej Lingas, Rolf Karlsson, 1993-06-23 The International Colloquium on Automata Languages and Programming ICALP is an annual conference series sponsored by the European Association for Theoretical Computer Science EATCS. It is intended to cover all important areas of theoretical computer science such as computability, automata, formal languages, term rewriting, analysis of algorithms, computational geometry, computational complexity, symbolic and algebraic computation, cryptography, data types and data structures, theory of data bases and knowledge bases, semantics of programming languages, program specification, transformation and verification, foundations of logic programming, theory of logical design and layout, parallel and distributed computation, theory of concurrency and theory of robotics. This volume contains the proceedings of ICALP 93 held at Lund University, Sweden, in July 1993. It includes five invited papers and 51 contributed papers selected from 151 submissions. *Graph-Theoretic Concepts in Computer Science* Peter Widmayer, Gabriele Neyer, Stephan Eidenbenz, 2003-06-26 This book constitutes the refereed proceedings of the 25th International Workshop on Graph Theoretic Concepts in Computer Science WG 99 held at the Centre Stefano Frascini on Monte Verita Ascona, Switzerland, in June 1999. The 33 revised full papers presented together with four invited contributions were carefully reviewed and selected from 64 papers submitted. The papers provide a wealth of new results for various graph classes, graph computations, graph algorithms and graph theoretical applications in a variety of fields.
