Individual Development and Social Change Explanatory Analysis represents a convergence of three lines of emphasis now visible in developmental research and theory building The three are 1 the life course as a focus for the study of development and social change and their interrelationships 2 the life span orientation to the study of individual development with its acknowledgment of the salience of contextual features for understanding development and 3 the growth of methodological innovations that provide more appropriate and powerful ways of exploiting data gathered to describe and explain developmental change processes The book opens with a study on how major cultural change originates and unfolds over time This is followed by separate chapters on the use of sequential designs for explanatory analyses evolutionary aspects of social and individual development the concepts of the theory of causal and weak causal regressive dependence and the concepts of age period and cohort from the perspective of developmental psychology Subsequent chapters examine development and aging as lifelong processes of historical populations the methodological integration of natural and cultural science perspectives in developmental psychology and application of the multifaceted methodology to the mutuality of constraint between sociocultural group and individual dynamics **Introduction to Criminology** Pamela J. Schram,Joseph A.

Schwartz,Stephen G. Tibbetts,2023-10-24 If you are considering a career in any aspect of criminal justice and you want to know more about the motivations and socio psychological makeup of serious offenders then this book is for you Introduction to Criminology Why Do They Do It applies the dominant theories in the existing criminological literature as to why people commit crimes In addition we examine many recent as well as many hypothetical examples of serious crimes and we demonstrate applications of theory as to why the offenders did what they did While other textbooks do a decent job in discussing the basic theories as well as exploring the various types of crime our book integrates various street crimes within each chapter and applies theories that are appropriate in explaining such criminal activity This is extremely important because most instructors never get to the latter typology chapters in a given semester or term So our approach is to incorporate them into the theoretical chapters in which they apply directly to the theories presented Our specific examples and true stories such as notable serial killings and other recent crimes in each chapter as well as our use of established theoretical models to explain the offenses is another primary distinction of this book Obviously this book is meant to be central to an introductory course in criminology but due to the emphasis on applied theoretical explanations it is also appropriate for higher level undergraduate and graduate courses in criminological theory or as a reference for anyone in the field of criminal justice In it we have integrated true crimes and some hypothetical examples both on a general level such as in the Applying Crime to Theory sections and more specifically in the Why Do They Do It sections which often involve serial killings mass murderers or other notorious examples of offenders offending The subtitle of our book Why Do They Do It

relates to our theme Our goal in writing this book was to apply established theories of crime which are often seen as abstract and hypothetical to real crimes that have occurred as well as to hypothetical ones that are quite likely to occur To this end we explore the various reasons for offending or the why they do it in various cases from the first documented serial killers in the United States the Harpe Brothers in the late 18th century to California cop killer spree killer Christopher Dorner in 2013 and then Payton S Gendron who massacred 10 Black shoppers at a grocery store in Buffalo New York in 2022 Importantly throughout these discussions of actual crimes we will apply theories As you will see some of the theories that applied to the earliest crimes seem to apply to the most modern crimes as well Unlike other authors in this field we chose not to include separate chapters on violent or property crimes because we have worked those into and applied them to the theories explored in each chapter We strongly believe that by integrating discussions of such serious crimes all crimes previously identified by the FBI as Index or Part I offenses including murder rape robbery aggravated assault burglary motor vehicle theft larceny and arson as well as other crimes such as simple assault and driving under the influence into the theoretical chapters provides the best exploration of why people commit such offenses And the flip side is good as well by discussing offenses together with theories we show you how to apply theories toward explaining other instances of criminal behavior Again this goes back to our theme of why do they do it It demonstrates our goal Apply the appropriate theories for the specific crime

Assessing for Learning Peggy L. Maki,2023-07-03 While there is consensus that institutions need to represent their educational effectiveness through documentation of student learning the higher education community is divided between those who support national standardized tests to compare institutions educational effectiveness and those who believe that valid assessment of student achievement is based on assessing the work that students produce along and at the end of their educational journeys This book espouses the latter philosophy what Peggy Maki sees as an integrated and authentic approach to providing evidence of student learning based on the work that students produce along the chronology of their learning She believes that assessment needs to be humanized as opposed to standardized to take into account the demographics of institutions as students do not all start at the same place in their

learning Students also need the tools to assess their own progress In addition to updating and expanding the contents of her first edition to reflect changes in assessment practices and developments over the last seven years such as the development of technology enabled assessment methods and the national need for institutions to demonstrate that they are using results to improve student learning Maki focuses on ways to deepen program and institution level assessment within the context of collective inquiry about student learning Recognizing that assessment is not initially a linear start up process or even necessarily sequential and recognizing that institutions develop processes appropriate for their mission and culture this book does not take a prescriptive or formulaic approach to building this commitment What it does present is a framework with examples of processes and strategies to assist faculty staff administrators and campus leaders to develop a sustainable and shared core institutional process that deepens inquiry into what and how students learn to identify and improve patterns of weakness that inhibit learning This book is designed to assist colleges and universities build a sustainable commitment to assessing student learning at both the institution and program levels It provides the tools for collective inquiry among faculty staff administrators and students to develop evidence of students abilities to integrate apply and transfer learning as well as to construct their own meaning Each chapter also concludes with 1 an Additional Resources section that includes references to meta sites with further resources so users can pursue particular issues in greater depth and detail and 2 worksheets guides and exercises designed to build collaborative ownership of assessment The second edition now covers Strategies to connect students to an institution s or a program s assessment commitment Description of the components of a comprehensive institutional commitment that engages the institution educators and students all as learners Expanded coverage of direct and indirect assessment methods including technology enabled methods that engage students in the process New case studies and campus examples covering undergraduate graduate education and the co curriculum New chapter with case studies that presents a framework for a backward designed problem based assessment process anchored in answering open ended research or study questions that lead to improving pedagogy and educational practices Integration of developments across professional scholarly and accrediting bodies and disciplinary organizations Descriptions and illustrations of assessment management systems Additional examples exercises guides and worksheets that align with new content
