Reviewing Content

Choose the letter that best answers the question or completes the statement.

1. What is the weaker, hotter zone beneath the lithosphere that allows for motion of Earth's rigid outer shell?

Asthenosphere

2. Where do most of Earth's earthquakes, volcanoes, and mountain building occur?

At plate boundaries

3. Alfred Wegener is best known for what hypothesis? List facts to support his theory.

His hypothesis of continental drift, which is supported by: same rocks, same fossils, and same plants were found on different continents. Also, some continents looked as if they fit together like puzzle pieces.

4. Complex mountain systems such as the Himalayas are the result of:

Two continental plates converging; "continental-continental convergence"

5. What is the type of plate boundary where two plates move together, causing one of the slabs of lithosphere to descend into the mantle beneath an overriding plate?

Ocean and continental crust with a convergent plate boundary.

6. What was one main objection to Wegener's hypothesis of continental drift?

Mechanism of continental drift: He could not prove the continents were moving.

7. Which one of the following was NOT used as support of Wegener's continental drift hypothesis?
