The Handbook of Interview Research is the most ambitious attempt yet at examining the place of the interview in contemporary society. Interviewing is the predominant mode of research in the social sciences. It is also the stock in trade of information seekers in organizations and institutions of all kinds as well as in the mass media. Across the board, interviews provide today's leading window on the world of experience. The Handbook offers a comprehensive examination of the interview at the cutting edge of information technology. Drawing upon leading experts from a wide range of professional disciplines, this book addresses conceptual and technical challenges that confront both academic researchers and interviewers with more applied goals. From interview theory to the nuts and bolts of the interview process, the coverage is impressively broad and authoritative. The Handbook of Interview Research is both encyclopedic and thematic. As an encyclopedia, it provides extensive discussions of the methodological issues now surrounding interview practice, offering a multi-faceted assessment of what has become the method of choice for obtaining personal information in today's society. But the Handbook also is a story which spins a particular tale of interviewing, one that moves from the commonly recognized individual interview to what is called the interview society. The gist of the presentation is that we can no longer regard the interview as simply an instrument for gathering data, but must now also view it as an integral part of society. **Review of the Department of the Navy's Investigation Into the Gun Turret Explosion Aboard the U.S.S. "Iowa"** United States. Congress. Senate. Committee on Armed Services, 1990

Interviewing in a Changing World Jonathan H. Amsbary, Larry Powell, 2018-01-17 Interviewing in a Changing World offers students the broadest coverage of interviewing available today by including several unique interview situations. Students begin to develop a better understanding of how to utilize strong interviewing skills in several different settings as this text demonstrates that interviewing techniques differ in accordance with varying situations and contexts. The Second Edition covers employment contexts such as job interviews, persuasive interviews, performance and appraisal interviews as well as media interviews on radio, television, newspapers, and political reporting. There are two full chapters on research, including interviewing skills needed for both qualitative and quantitative research. The book covers several unique interviewing situations that are on the cutting edge of communication research, with an interview with a professional from the field and multiple sidebars on related theoretical and applied issues within each chapter. **Ethics in the Age of the Spirit** Howard N. Kenyon, 2019-10-29 What causes us as a people of faith to think and act the way we think and act? Are we motivated by whatever is most practical, by a particular understanding of Scripture, by the influence of the culture around us, or by something more profound? On the premise that Pentecostalism does have much to contribute to the study of ethics, this book explores how one group, the American Assemblies of God, has wrestled with issues of racism, women in ministry, and Christian involvement in war. In the process, readers are invited to examine the connection or disconnect between what we believe and how we live out our faith. **Advanced Sampling Methods** Raosaheb

Latpate, Jayant Kshirsagar, Vinod Kumar Gupta, Girish Chandra, 2021-05-07 This book discusses all major topics on survey sampling and estimation. It covers traditional as well as advanced sampling methods related to the spatial populations. The book presents real world applications of major sampling methods and illustrates them with the R software. As a large sample size is not cost efficient, this book introduces a new method by using the domain knowledge of the negative correlation between the variable of interest and the auxiliary variable in order to control the size of a sample. In addition, the book focuses on adaptive cluster sampling, rank set sampling, and their applications in real life. Advance methods discussed in the book have tremendous applications in ecology, environmental science, health science, forestry, bio sciences, and humanities. This book is targeted as a text for undergraduate and graduate students of statistics as well as researchers in various disciplines.
