Touching Surfaces Touching Surfaces:

Touching Surfaces Anca Cristofovici, 2009-01-01 Who isn't seduced by the idea of an affinity between aging and aesthetics? Yet when does aging truly begin? What attributes does the aesthetic embrace? Looking into startling photographic art of the past three decades, this book is prompted by such questions and turns them into a meditation on how aesthetics mediates our relation to time. The photographic approach of the corporeal is at the center of the book. Within a phenomenological framework, Cristofovici brings into focus the physical and the psychic body to read aging as a process of change and becoming over time. Her understanding of aging sees beyond difference into larger patterns of perceptions that we share. Offering valuable insights into aging as a process of subject construction, this book will be of interest to students and scholars of visual culture, photography, art history, age studies, and theories of knowledge. This cross-disciplinary study that puts theory to the test of life's and art's paradoxes in an evocative style will also appeal to a wider readership interested in how photography and aging illuminate each other.

Surface Computing and Collaborative Analysis Work Judith Brown, Jeff Wilson, Robert Biddle, Chris Hack, Stevenson Gossage, 2022-05-31 Large surface computing devices, wall-mounted or tabletop with touch interfaces, and their application to collaborative data analysis, an increasingly important and prevalent activity, is the primary topic of this book. Our goals are to outline the fundamentals of surface computing, a still maturing technology; review relevant work on collaborative data analysis; describe frameworks for understanding collaborative processes; and provide a better understanding of the opportunities for research and development. We describe surfaces as display technologies with which people can interact directly and emphasize how interaction design changes when designing for large surfaces. We review efforts to use large displays, surfaces, or mixed display environments to enable collaborative analytic activity. Collaborative analysis is important in many domains, but to provide concrete examples and a specific focus, we frequently consider analysis work in the security domain and, in particular, the challenges security personnel face in securing networks from attackers and intelligence analysts encounter when analyzing intelligence data. Both of these activities are becoming increasingly collaborative endeavors, and there are huge opportunities for improving collaboration by leveraging surface computing. This work highlights for interaction designers and software developers the particular challenges and opportunities presented by interaction with surfaces. We have reviewed hundreds of recent research papers and report on advancements in the fields of surface-enabled collaborative analytic work, interactive techniques for surface technologies, and useful theory that can provide direction to interaction design work. We also offer insight into issues that arise when developing applications for multi-touch surfaces, derived from our own experiences creating collaborative applications. We present these insights at a level appropriate for all members of the software design and development team.

Schmidt,2012-11-04 In this thesis we contribute to the body of surface computing research by proposing novel methods for user identification We present three novel methods for instantaneous user identification IdWristbands uses bracelets that emit infrared codes to identify individual finger touches HandsDown is based on biometrics and allows users to identify by placing their hand flat on the surface and PhoneTouch employs mobile phones in a stylus like fashion for identified direct touch interaction We use IdWristbands HandsDown and PhoneTouch as basis for analyzing and exploring the design space of personalized interaction We illustrate its opportunities and benefits by introducing a wide range of novel user aware interaction techniques In a user study we show that instantaneous user identification and personalization conveniently facilitate interaction techniques that are otherwise not immediately accessible or difficult to realize **INFECTION**
