Toward A New Climate Agreement Conflict Resolution And Governance:

Toward a New Climate Agreement Todd L. Cherry, Jon Hovi, David M. McEvoy, 2014-03-05 Climate change is one of the most pressing problems facing the global community. Although most states agree that climate change is occurring and is at least partly the result of humans' reliance on fossil fuels, managing a changing global climate is a formidable challenge. Underlying this challenge is the fact that states are sovereign, governed by their own laws and regulations. Sovereignty requires that states address global problems such as climate change on a voluntary basis by negotiating international agreements. Despite a consensus on the need for global action, many questions remain concerning how a meaningful international climate agreement can be realized. This book brings together leading experts to speak to such questions and to offer promising ideas for the path toward a new climate agreement. Organized in three main parts, it examines the potential for meaningful climate cooperation. Part 1 explores sources of conflict that lead to barriers to an effective climate agreement. Part 2 investigates how different processes influence states' prospects of resolving their differences and of reaching a climate agreement that is more effective than the current Kyoto Protocol. Finally, part 3 focuses on governance issues, including lessons learned from existing institutional structures. The book is unique in that it brings together the voices of experts from many disciplines such as economics, political science, international law, and natural science. The authors are academics, practitioners, consultants, and advisors. Contributions draw on a variety of methods and include both theoretical and empirical studies. The book should be of interest to scholars and graduate students in the fields of economics, political science, environmental law, natural resources, earth sciences, sustainability, and many others. It is directly relevant for policy makers, stakeholders, and climate change negotiators, offering insights into the role of uncertainty, fairness, policy linkage, burden sharing, and alternative institutional designs.

Beyond Treaties: Rethinking Legal Mechanisms for International Climate Governance Türkan Gülce Budak,2025-04-05 This open access book examines the implications of the shift towards minilateralism for international climate law analysing how climate related trade measures and Paris Agreement compatible platforms may enhance global climate governance The landscape of international climate change law is evolving from a traditional consensus based treaty model characterized by comprehensive yet often slow moving agreements toward a more pragmatic approach known as minilateralism In this emerging paradigm smaller groups of countries negotiate and implement trade measures aimed at mitigating climate impacts An exemplary case is the European Green Deal which introduces climate related trade measures as a key instrument for achieving sustainability goals within and beyond Europe Additionally countries are exploring minilateral cooperation platforms within the Paris Agreement framework to further their climate objectives The central questions to be addressed in this book are twofold First how can the design of the minilateral schemes comply with the Paris Agreement s international cooperation common but differentiated responsibilities and respective capacities and market based mechanisms principles Second to what extent does the climate related trade measures conform with the WTO regime particularly with the non discrimination principles of the trade law namely most favoured nation and national treatment

Formal Modeling in Social Science Carol Mershon,Olga Shvetsova,2019-09-03 A formal model in the social sciences builds explanations when it structures the reasoning underlying a theoretical argument opens venues for controlled experimentation and can lead to hypotheses Yet more importantly models evaluate theory build theory and enhance conjectures Formal Modeling in Social Science addresses the varied helpful roles of formal models and goes further to take up more fundamental considerations of epistemology and methodology The authors integrate the exposition of the

epistemology and the methodology of modeling and argue that these two reinforce each other They illustrate the process of designing an original model suited to the puzzle at hand using multiple methods in diverse substantive areas of inquiry The authors also emphasize the crucial though underappreciated role of a narrative in the progression from theory to model Transparency of assumptions and steps in a model means that any analyst will reach equivalent predictions whenever she replicates the argument Hence models enable theoretical replication essential in the accumulation of knowledge Formal Modeling in Social Science speaks to scholars in different career stages and disciplines and with varying expertise in modeling

Emissions Trading Schemes under International Economic Law James Munro, 2018-08-09 The announcement by China that it will implement a national emissions trading scheme confirms the status of this instrument as the pre eminent policy choice for mitigating climate change China will join the dozens of existing and emerging schemes around the world from the EU to California South Korea to New Zealand that use carbon units otherwise known as emissions permits or carbon credits to trade in greenhouse gas emissions in a multi billion dollar global carbon market However to date there has been no consensus about this pre eminent policy instrument being regulated by international economic law through the World Trade Organization international investment agreements and free trade agreements Munro addresses this issue by evaluating whether carbon units qualify as goods services financial services and investments under international economic law and showing how international economic law applies to emissions trading scheme in diverse and unexpected ways Further by engaging in a comparative assessment of schemes around the world his book illustrates how and why all emissions trading schemes engage in various forms of violations of international economic law which would not in most instances be justified by environmental or other exceptions In doing so he demonstrates how such schemes can be designed or reformed in ways to ensure their future compliance

Linking the European Union Emissions Trading System Charlotte Unger, 2021-01-25 This book focuses on the linking of the European Union Emissions Trading System EU ETS with other independent regional ETS While rich practical and academic research has evolved on the economic and technical side of ETS linking political drivers and barriers have so far been underrepresented in this debate Filling this lacuna and based on international relations theory existing research and qualitative fieldwork this book introduces the range of political conditions that influence linking such as political leadership and stakeholder activity Specifically it analyzes which of these aspects have played a role in three different linking activities of the EU 1 a failed linking attempt EU ETS California Cap and Trade Program 2 a successful linking treaty EU ETS Switzerland Emissions Trading System and 3 an agreed upon but not realized link EU ETS Australia Carbon Pricing Mechanism Through an interrogation of these examples Dr Unger concludes that it is not only the technical challenges or the overall economic benefit but rather domestic interests structural aspects and external international political developments that have jointly dominated linking activities especially those in which the EU takes part This book will be of great interest to scholars and policy makers working in climate policy and EU

environmental politics The New Power Politics of Global Climate Governance Maximilian Terhalle,Charlotte Streck,2018-04-19 This book is based on the assumption that great powers determine global politics and in this instance environmental politics It addresses the approaches of both established and rising powers and their implications for the advancement of international climate negotiations The new introduction looks at the key developments in this realm since 2013 examining the bilateral deals between China and the United States and the results of the UNFCCC s 21st Convention of the Parties COP convening at Paris in 2015 Two key features link the contributions of this volume their underlying assumption that major powers are the central actors in determining global environmental politics and their assessment of and implications of the approaches both of rising and established major powers for global climate norms One key argument of this volume is that today s geopolitics are about who gets how much in the fiercely competitive race over the available carbon space The book concludes that prudently balancing power in the new century requires a fair sharing of burden among the existing and emerging powers In light of such burden sharing pluralistic domestic politics as well as diverging normative beliefs and worldviews require consideration of different conditions even if historical legacies of the industrialised world have increasingly been put into question as a political argument by the United States This book is based on a special issue of the journal Climate Policy **Governing Climate Change** Andrew Jordan,Dave Huitema,Harro van Asselt,Johanna

Forster,2018-05-03 Climate change governance is in a state of enormous flux New and more dynamic forms of governing are appearing around the international climate regime centred on the United Nations Framework Convention on Climate Change UNFCCC They appear to be emerging spontaneously from the bottom up producing a more dispersed pattern of governing which Nobel Laureate Elinor Ostrom famously described as polycentric This book brings together contributions from some of the world s foremost experts to provide the first systematic test of the ability of polycentric thinking to explain and enhance societal attempts to govern climate change It is ideal for researchers in public policy international relations environmental science environmental management politics law and public administration It will also be useful on advanced courses in climate policy and governance and for practitioners seeking incisive summaries of developments in particular sub areas and sectors This title is also available as Open Access on Cambridge Core *Wspc Reference On Natural Resources And Environmental Policy In The Era Of Global Change, The (In 4 Volumes)* ,2016-10-21 The WSPC Reference on Natural Resources and Environmental Policy in the Era of Global Change provides a comprehensive and prominent reference of various highly authoritative volumes of long term scientific value for milestone concepts and theories The books in the reference set are edited by leading experts in the fields of Game Theory International Relations and Global Politics Computable General Equilibrium CGE Economy Wide Modeling and Experimental Economics Each book in the reference set includes chapters that are laid out by recognized broadly respected researchers in fields associated with issues related to natural resources and environmental policy in the era of global change The reference set focuses on the economic and

strategic aspects of interactions among various parts of society all dependent on the availability and utilization of limited natural resources and their impact on the environment Policy implications are addressed including current challenges and future perspectives The combination of the four books provides a unique perspective on the issues that engage the public discourse of researchers and policy makers at state regional and global levels Each of the books in the reference set and all four books as a whole provide coverage of disciplines and angles through which the reader can obtain an understanding of the state of the art of dealing with natural resources and environmental policy in the era of global change The books in the reference set complement each other and provide a scientific understanding of our ability to address the issues covered
