Totally Accessible MRI Michael L. Lipton, 2010-04-28 BSD All magnetic resonance technologists and all radiologists who work with magnetic resonance MR technology can be divided into two subgroups 1 those who understand the underlying physics principles and how to apply them and 2 those who do not For so many patients and for so many diagnostic considerations the difference between membership in these two groups is minimal One can easily diagnose a vestibular schwannoma and accurately differentiate it from a cerebellopontine angle meningioma without being that well versed with many of the concepts underlying the creation of the MR images on which these tumors are depicted One by rote can generate images of the pelvis that are quite diagnostic and aesthetically pleasing without really understanding the intricate interrelationships between the varying imaging parameters used in the generation of the obtained image contrast There are certain situations however for which a more in depth understanding is required For example Seeing tissue signal disappear on a short T1 inversion recovery sequence yet recognizing that it does not have to originate from fat but may come from methemoglobin or some other short T1 tissue may prove clinically vital for arriving at the correct diagnosis For such circumstances understanding the underlying principles that govern the creation of the image and the contrast contained therein is critical and sets one apart and distinctly ahead of the competition who cannot make this claim [Totally Accessible MRI](#) Michael L. Lipton, 2010-11-16 This practical guide offers an accessible introduction to the principles of MRI physics Each chapter explains the why and how behind MRI physics Readers will understand how altering MRI parameters will have many different consequences for image quality and the speed in which images are generated Practical topics selected for their value to clinical practice include progressive changes in key MRI parameters imaging time and signal to noise ratio A wealth of high quality illustrations complemented by concise text enables readers to gain a thorough understanding of the subject without requiring prior in depth knowledge **Low-Dimensional Materials, Systems, and Applications, Volume 2**

Purushottam Chakraborty, Dambarudhar Mohanta, 2025-10-10 Low Dimensional Materials Systems and Applications Volume 2 Principles Methods and Approaches in Biomedicine and Bioengineering showcases the complexities and uniqueness of low dimensional materials and highlights the most recent discoveries in the fields of biomedicine and bioengineering Low dimensional nanoscale materials are challenging as they exhibit properties distinctly different from their bulk counterparts There is an exponential increase of reactivity at the molecular level due to high surface to volume ratios in these materials and not only are their electronic optical and chemical properties different so too are their mechanical characteristics This book highlights the state of the art theoretical and experimental descriptions of the complexities unique properties and latest applications of low dimensional materials with a particular focus on the fields of biomedicine and bioengineering The book is primarily for researchers working on the simulation fabrication analysis and uses of low dimensional nanoscale materials including biotechnologists materials scientists and chemists Serves as a comprehensive ready reference for beginners

researchers and expert practitioners working on the understanding and manipulation of low dimensional structures in biomedicine and bioengineering Presents the latest theoretical and experimental approaches and complexities of low dimensional materials research Features contributions from leading experts in the field of low dimensional materials An Integrative Guide to Consumer Neuroscience Sven Braeutigam, Peter Kenning, 2022-03-16 Consumer neuroscience is a complex interdisciplinary and emerging field that cuts across psychology neuroscience and consumer research The book provides a comprehensive overview of the foundations and applications of modern consumer neuroscience exploring a wide range of established and emergent topics in the field making it the ideal resource for anyone looking to broaden their knowledge base The content provides a thorough high level guide to the mathematical technological and theoretical aspects of consumer neuroscience alongside a wide range of specific applications situated within a scientific context The book includes chapters on cognitive processes and behaviors the human brain mathematical concepts and neuroscience technologies It considers the difference of individual social and commercial neuroscience through the lens of gender differences aging and ethics amongst other concepts enabling the reader to adopt an holistic view of the field and discover new research directions This is enhanced by the inclusion of consolidating questions and answers for each chapter alongside numerous images to enhance the reader s understanding of the topic The book is an essential read for the aspiring researcher or practitioner striving for an in depth understanding of the field and its ramifications Lung Inflammation in Health and Disease, Volume II Yong-Xiao Wang, 2021-05-21 Lung diseases are leading causes of death and disability globally with about 65 million people suffering from COPD and 334 million from asthma Each year tens of millions of people develop and can die from lung infections such as pneumonia and TB Systemic inflammation may induce and exacerbate local inflammatory diseases in the lungs and local inflammation can in turn cause systemic inflammation There is increasing evidence of the coexistence of systemic and local inflammation in patients suffering from asthma COPD and other lung diseases and the co morbidity of two or more local inflammatory diseases often occurs For example rheumatoid arthritis frequently occurs together with and promotes the development of pulmonary hypertension This co morbidity significantly impacts quality of life and can result in death for some patients Current treatment options for lung disease are neither always effective nor condition specific there is a desperate need for novel therapeutics in the field Additionally the molecular and physiological significance of most major lung diseases is not well understood which further impedes development of new treatments especially in the case of coexistent lung diseases with other inflammatory diseases Great progress has been made in recent years in many areas of the field particularly in understanding the molecular geneses regulatory mechanisms signalling pathways and cellular processes within lung disease as well as basic and clinical technology drug discovery diagnoses treatment options and predictive prognoses This is the first text to aggregate these developments In two comprehensive volumes experts from all over the world present state of the art advances in the study of lung inflammation in

health and disease Contributing authors cover well known as well as emerging topics in basic translational and clinical research with the aim of providing researchers clinicians professionals and students with new perspectives and concepts The editors hope these books will also help to direct future research in lung disease and other inflammatory diseases and result in the development of novel therapeutics
