Bigelow Aerospace Erik Seedhouse, 2014-09-25 Here for the first time you can read how a space technology start up is pioneering work on expandable space station modules how Robert Bigelow licensed the TransHab idea from NASA and how his company developed the technology for more than a decade how very soon a Bigelow expandable module will be docked with the International Space Station At the core of Bigelow s plan is the inflatable module technology Tougher and more durable than their rigid counterparts these inflatable modules are perfectly suited for use in the space where Bigelow plans to link them together to form commercial space stations This book describes how this new breed of space stations will be built and how the link between Bigelow Aerospace NASA and private companies can lead to a new economy a space economy Finally the book touches on Bigelow s aspirations beyond low Earth orbit plans that include the landing of a base on the lunar surface and the prospect of missions to Mars

Interplanetary Outpost Erik Seedhouse, 2012-02-02 *Interplanetary Outpost* follows the mission architecture template of NASA s plan for Human Outer Planet Exploration HOPE which envisions sending a crew to the moon Callisto to conduct exploration and sample return activities To realize such a mission the spacecraft will be the most complex interplanetary vehicle ever built representing the best technical efforts of several nations A wealth of new technologies will need to be developed including new propulsion systems hibernation strategies and revolutionary radiation shielding materials Step by step the book will describe how the mission architecture will evolve how crews will be selected and trained and what the mission will entail from launch to landing However the focus of *Interplanetary Outpost* is on the human element The extended duration logistical challenges

radiation concerns communication lag times isolation and deleterious effects on the human body will conspire to not only significantly impair human performance but also affect the behavior of crewmembers This book addresses each of these issues in detail while still providing the reader with a background to the necessary elements comprising such a mission

Survival and Sacrifice in Mars Exploration Erik Seedhouse,2015-03-26 With current technology a voyage to Mars and back will take three years That s a lot of time for things to go wrong But sooner or later a commercial enterprise will commit itself to sending humans to Mars How will the astronauts survive Some things to consider are With current technology a voyage to Mars and back will take three years That s a lot of time for things to go wrong But sooner or later a commercial enterprise will commit itself to sending humans to Mars How will the astronauts survive Some things to consider are Who decides what medical resources are used for whom Who decides what medical resources are used for whom What is the relative weight of mission success and the health of the crew What is the relative weight of mission success and the health of the crew Do we allow crewmembers to sacrifice their lives for the good of the mission Do we allow crewmembers to sacrifice their lives for the good of the mission And what if a crewmember does perish Do we store the body for return to Earth or give the member a burial in space Questions like these and hundreds of others have been explored by science fiction but scant attention has been paid by those designing missions Fortunately the experience gained in polar exploration more than 100 years ago provides crews and mission planners with a framework to deal with contingencies and it is this that forms the core of this book Why the parallels between polar and space exploration Because polar exploration offers a better analogy for a Mars mission today than those invoked by the space community Although astronauts are

routinely compared to Lewis and Clark Mars bound astronauts will be closer in their roles to polar explorers And as much as space has been described as a New Frontier Mars bears greater similarity to the polar regions which is why so much can be learned from those who ventured there And what if a crewmember does perish Do we store the body for return to Earth or give the member a burial in space Questions like these and hundreds of others have been explored by science fiction but scant attention has been paid by those designing missions Fortunately the experience gained in polar exploration more than 100 years ago provides crews and mission planners with a framework to deal with contingencies and it is this that forms the core of this book Why the parallels between polar and space exploration Because polar exploration offers a better analogy for a Mars mission today than those invoked by the space community Although astronauts are routinely compared to Lewis and Clark Mars bound astronauts will be closer in their roles to polar explorers And as much as space has been described as a New Frontier Mars bears greater similarity to the polar regions which is why so much can be learned from those who ventured there

SpaceX Erik Seedhouse, 2013-06-15 This first account of commercial spaceflight's most successful venture describes the extraordinary feats of engineering and human achievement that have placed SpaceX at the forefront of the launch industry and made it the most likely candidate for transporting humans to Mars Since its inception in 2002 SpaceX has sought to change the space launch paradigm by developing a family of launch vehicles that will ultimately reduce the cost and increase the reliability of space access tenfold Coupled with the newly emerging market for governmental private and commercial space transport this new model will re-ignite humanity's efforts to explore and develop space Formed in 2002 by Elon Musk the founder of PayPal and the Zip2 Corporation SpaceX has already developed two state-of-the-art new launch vehicles established an impressive launch manifest and been awarded COTS funding by NASA to demonstrate delivery and return of cargo to the ISS This book describes how simplicity low cost and reliability can go hand in hand as promoted in the philosophy of SpaceX It explains how by eliminating the traditional layers of internal management and external sub-contractors and keeping the vast majority of manufacturing in-house SpaceX reduces its costs while accelerating decision making and delivery controls quality and ensures constant liaison between the design and manufacturing teams

Suborbital Erik Seedhouse, 2014-01-27 The nascent commercial suborbital spaceflight industry will soon open the space frontier to commercial astronauts payload specialists scientists and of course tourists This book describes the tantalizing science opportunities to be offered when suborbital trips become routine within the next 12 to 18 months It describes the difference in training and qualification necessary to become either a spaceflight participant or a fully fledged commercial suborbital astronaut and it describes the vehicles this new class of astronauts will use Anticipation is on the rise for the new crop of commercial suborbital spaceships that will serve the scientific and educational market These reusable rocket propelled vehicles are expected to offer quick routine and affordable access to the edge of space along with the capability to carry research and educational crew members Yet to be demonstrated is the hoped-for flight rates of suborbital vehicles

Quick turnaround of these craft is central to realizing the profit making potential of repeated sojourns to suborbital heights. As this book outlines, vehicle builders still face rigorous shake out schedules, flight safety hurdles as well as extensive trial runs of their respective craft before suborbital space jaunts become commonplace. The book examines some of these cash and carry suborbital craft under development by such groups as Blue Origin, Masten Space Systems, Virgin Galactic and XCOR Aerospace and describes the hurdles the space industry is quickly overcoming en route to the industry developing into a profitable economic entity. Seedhouse also explains how the commercial suborbital spaceflight industry is planning and preparing for the challenges of marketing and financing and how it is marketing the hiring of astronauts. It examines the role of commercial operators as enablers accessing the suborbital frontier and how a partnership with governments and the private sector will eventually permanently integrate the free market's innovation of commercial suborbital space activities.

Astronauts For Hire Erik Seedhouse, 2012-02-22 *Astronauts For Hire* is a comprehensive and authoritative study of the increasing need for commercial astronauts. Erik Seedhouse provides unique insights into the burgeoning new field of commercial space operation and the individuals who will run these missions. Section I begins by describing how *Astronauts for Hire* (A4H) was created in 2010 by Brian Shiro, a highly qualified NASA astronaut candidate and a group of other astronaut candidates. Erik introduces A4H's vision for opening the space frontier to commercial astronauts and describes the tantalizing science opportunities offered when suborbital and orbital trips become routine. Section II describes the vehicles astronauts will use. Anticipation is on the rise for the new crop of commercial suborbital and orbital spaceships that will serve the scientific and educational market. These reusable rocket propelled vehicles are expected to offer quick routine and affordable access to the edge of space along with the capability to carry research and educational crew members. The quick turnaround of these vehicles is central to realizing the profit making potential of repeated sojourns by astronauts to suborbital and orbital heights. Section III describes the various types of missions this new corps of astronauts will fly and who will hire them. For example, suborbital flights may be used to do high altitude astronomy, life science experiments and microgravity physics. This section continues with an examination of the types of missions that will accelerate human expansion outward to Exploration Class missions through lunar bases, the establishment of interplanetary spaceports and outposts on the surface of Mars. Along the way it describes the tasks commercial astronauts will perform ranging from mining asteroids to harvesting helium.

Pulling G Erik Seedhouse, 2012-09-24 Performing in a high G environment is extremely demanding on the body. Pulling G forces blood to the body's extremities, putting the pilot, astronaut or driver at risk of G Induced Loss of Consciousness (G LOC). In *Pulling G*, Erik Seedhouse describes what it feels like to pull 7 G in a fighter plane and the G pressures on the body when driving a Formula 1 car and many other gravity defying vehicles. The book relates for the first time the effects of G in both hyper gravity and microgravity. It describes the human response to increased and decreased G and the potentially dangerous effects of high G with particular reference to dynamic injuries sustained in high

acceleration environments Pulling G provides an overview of G related research and the development of intervention methods to mitigate the effects of increased and reduced G As well as relating the training required to overcome G forces on the Formula 1 track Erik Seedhouse looks at the G forces encountered in such G environments as ejection from an aircraft launch re entry and zero G The book also considers how artificial gravity can be used to prevent bone demineralization and to reduce the effects of de conditioning in astronauts Erik Seedhouse is eminently qualified to describe the effects of large accelerations on the body In addition to being the author of several previously published Springer Praxis books he has developed astronaut training protocols and is the training director for Astronauts for Hire A4H He is also the Canadian Forces High Risk Acceleration Training Officer
