Sustainability in Energy and Buildings Nacer M'Sirdi, Aziz Namaane, Robert J. Howlett, Lakhmi C Jain, 2012-01-15 Welcome to the proceedings of the Third International Conference on Sustainability in Energy and Buildings SEB 11 held in Marseilles in France organised by the Laboratoire des Sciences de l'Information et des Systèmes LSIS in Marseille France in partnership with KES International SEB 11 formed a welcome opportunity for researchers in subjects related to sustainability renewable energy technology and applications in the built environment to mix with other scientists industrialists and stakeholders in the field The conference featured presentations on a range of renewable energy and sustainability related topics In addition the conference explored two innovative themes the application of intelligent sensing control optimisation and modelling techniques to sustainability and the technology of sustainable buildings These two themes combine synergetically to address issues relating to The Intelligent Building SEB 11 attracted a significant number of submissions from around the world These were subjected to a two stage blind peer review process With the objective of producing a high quality conference only the best 50 or so of these were selected for presentation at the conference and publication in the proceedings It is hoped that you will find this volume an interesting informative and useful resource for your research

Environmental Policy is Social Policy - Social Policy is Environmental Policy Isidor Wallimann, 2014-07-08 This book argues that social and environmental policy should be synthetically treated as one and the same field that both are but two aspects of the same coin if sustainability is the goal Such a paradigm shift is indicated important and timely to effectively move towards sustainability This book is the first to take this approach and to give examples for it Not to synthetically merge the two fields has been and will continue to be highly insufficient inefficient and contradictory for policy and public administration aiming for a transformation towards a sustainable world In general social problems are dealt with in one policy corner and environmental problems in another Rarely is social policy at large concerned with its impact on the environment or its connection with and relevance to environmental policy Equally environmental problems are generally not seen in conjunction with social policy even though much environmental policy directly relates to health nutrition migration and other issues addressed by social policy This book intends to correct the pattern to separate these very significant and large policy fields Using examples from diverse academic and applied fields it is shown how environmental policy can and should be thought of as social policy and how social policy can and should simultaneously be seen as environmental policy Tremendous benefits are to be expected

Routledge International Handbook of Sustainable Development Michael Redclift, Delyse Springett, 2015-03-02 This Handbook gives a comprehensive international and cutting edge overview of Sustainable Development It integrates the key imperatives of sustainable development namely institutional environmental social and economic and calls for greater participation social cohesion justice and democracy as well as limited throughput of materials and energy The nature of sustainable development and the book's theorization of the concept underline the need for interdisciplinarity in the discourse as exemplified in each

Introducing Architectural Tectonics Chad

Schwartz, 2016-10-04 Introducing Architectural Tectonics is an exploration of the poetics of construction. Tectonic theory is an integrative philosophy examining the relationships formed between design, construction, and space while creating or experiencing a work of architecture. In this text, author Chad Schwartz presents an introductory investigation into tectonic theory, subdividing it into distinct concepts in order to make it accessible to beginning and advanced students alike. The book centers on the tectonic analysis of twenty contemporary works of architecture located in eleven countries, including Germany, Italy, United States, Chile, Japan, Bangladesh, Spain, and Australia, and designed by such notable architects as Tadao Ando, Herzog & de Meuron, Kengo Kuma, Olson Kundig, and Peter Zumthor. Although similarities do exist between the projects, their distinctly different characteristics, location, and climate context, size, program, construction methods, and range of interpretations of tectonic expression provide the most significant lessons of the book, helping you to understand tectonic theory. Written in clear, accessible language, these investigations examine the poetic creation of architecture, showing you lessons and concepts that you can integrate into your own work, whether studying in a university classroom or practicing in a professional office.
