Robert D. Hall, Editor in Chief Target Magazine, Graupp and Wrona bring many examples of companies that improved competitiveness by improving their capacity to fully engage their workforce. Steven Spear, Sr Lecturer MIT Sloan School of Management. **Becoming the Supervisor** Hugh R. Alley, 2020-05-07. Becoming a Supervisor tells the story of Trevor who works as one of the production team in a small company that makes toy boats. He is thrust into the role of supervisor unexpectedly when his general manager reacts to his constant suggestions of how things could be better. When the GM becomes ill, Trevor struggles to take up the slack for several months until a new GM arrives. The core of the book follows Trevor's growth under the coaching of Julie, his new GM. As Trevor deals with one challenge after another, Julie guides him on a journey to learn the core skills needed by all front line leaders. The reader takes away four key ideas: 1. Front line leadership skills are not too complicated to learn. 2. These skills are something that they can develop in themselves regardless of what their organization does. 3. Tools and skills are there to help solve real business problems; implementing the tools is not a strategy. 4. In your role as supervisor, directing or responsible for others, you have to look after the mission of the company AND look after your people; doing only one is not an option. Essentially, this book is intended to give hope to a new supervisor or team lead. They will finish the book knowing that the skills they need can be learned and aren't that difficult to acquire. It is designed to introduce the central skills that any supervisor has to be able to master at least with a basic working competency: instructing, leading, and making improvements in their own area. It introduces some of the more widely used tools that a new supervisor may need. More importantly, it ties these tools and skills to solving particular problems. Readers will understand that the tools are not important for their own sake but only to the extent that the tools serve the larger objective of the organization. This book is designed to give the reader an entertaining and hopeful story about the very difficult transition from worker to supervisor, from being one of the crew to directing the crew. It is an emotionally tough transition, and the idea that someone could see a model of how it can work out will be helpful to folks new in a leadership role. Finally, the book provides a reference to other sources of information that will let the reader extend their learning about each of the tools or skills referenced in the contents. **Getting to Standard Work in Health Care** Patrick Graupp, Martha Purrier, 2017-09-28. Lean Manufacturing , Exploding Technical Communication Remley Dirk, Charles Sides, 2020-04-29. Within the framework of New Literacy Studies, Dirk Remley presents a historical study of how technical communication practices at a World War II arsenal sponsored literacy within the community in which it operated from 1940 to 1960 and contemporary implications of similar forms of sponsorship. The Training within Industry (TWI) methods developed by the U.S. government and industry at that time

included multimodal literate practices particularly combinations of visual oral experiential and print linguistic text Analyses reveal a hierarchy in which print linguistic literacies were generally esteemed at the workplace and in the community This literacy hierarchy contributed to a catastrophic accident that killed 11 people prompting changes in the approach to designing certain training documents This book links technical communication especially the multimodal forms of representation commonly found in technical communication and instructional materials to the concept of literacy sponsorship The TWI methods used in training and system improvement during World War II are currently applied in business and industry as part of the lean operating and continuous improvement philosophies These methods have also become part of the experiential learning philosophy favored in academia Remley includes examples of current applications of multimodal forms of technical communication similar to those used at the arsenal as well as new media related applications related to training and instruction He also discusses their implications for literacy sponsorship This book provides useful information for technical communication and literacy scholars and educators as well as practical case studies for business leaders consultants and practitioners
