

III. Types of Chemical Reactions

The 4 primary types of chemical reactions are:

1. **Combination (synthesis) reaction:** Two or more reactants combine to make a new product. Going from simple to complex molecules.
2. **Decomposition reaction:** A single reactant breaks down to form two or more products. Going from complex to simple molecules.
3. **Single Displacement reaction:** A single element replaces a similar element of an adjacent reactant compound.
4. **Double Displacement reaction:** Two compounds exchange elements, producing two new compounds.

Brady, Fred Senese, 2008-01-28 The image on the front cover depicts a carbon nanotube emerging from a glowing plasma of hydrogen and carbon as it forms around particles of a metal catalyst. Carbon nanotubes are a recently discovered allotrope of carbon. Three other allotropes of carbon, buckyballs, graphite, and diamond, are illustrated at the left, as is the molecule methane, CH_4 , from which nanotubes and buckyballs can be made. The element carbon forms an amazing number of compounds with structures that follow from simple methane found in natural gas to the complex macromolecules that serve as the basis of life on our planet. The study of chemistry also follows from the simple to the more complex, and the strength of this text is that it enables students with varied backgrounds to proceed together to significant levels of achievement. **Basic Concepts of Chemistry, Study Guide** Leo J. Malone, 1989-02-21 This Third Edition revised to provide smoother transitions between topics employs a concise yet informal approach to basic chemistry organized to help students employ basic math skills and problem solving strategies. Writing style is straightforward and presentation incorporates many concrete analogies to clarify new concepts. Includes many illustrative worked examples. Organic Chemistry Reactions Speedy Publishing, 2014-09-03 Students of organic chemistry are expected to consume much information in a relatively short period of time. Most have had no clue to the expanse of knowledge that organic chemistry explores. Students are required to memorize elements and molecules that are commonly used in organic chemistry. Additionally, they are required to memorize formulas and chemical reactions, which is clearly the most difficult part of the course. Having an organic chemistry reaction study guide can help the student by supplying a quick reference to the most commonly used reactions. The guide can be reviewed when the student has some down time. **Study Guide** Darrell D. Ebbing, Susan M.
