Wind Power Politics and Policy Scott Victor Valentine, 2014-10-30 The wind power development policy community faces a conundrum On the one hand as the most commercially viable form of utility scale renewable energy the wind power industry has experienced in excess of ten fold growth in total installed capacity over the past decade On the other hand installed wind power capacity still accounts for less than 2% of global electricity generation capacity despite the prevalence of studies indicating that in certain situations wind power can be a cheaper form of electricity than most fossil fuel alternatives Accordingly the most puzzling aspect of wind power development policy can be summed up in the following manner given the global imperative to facilitate an expedient transition away from CO2 intensive energy technologies and the commercial viability of wind power what is stopping the wind power industry from capturing higher market shares around the world In *Wind Power Politics and Policy* Scott

Valentine examines this question from two angles First it presents an analysis of social technical economic and political STEP barriers which research shows tends to stymie wind power development Case studies which examine phlegmatic wind power development in Japan Taiwan Australia and Canada are presented in order to demonstrate to the reader how these barriers manifest themselves in practice Second the book presents an analysis of STEP catalysts which have been linked to successful growth of wind power capacity in select nations Four more case studies that examine the successful development of wind power in Denmark Germany the USA and China are put forth as practical examples of how supportive factors conflate to produce conditions that are conducive to growth of wind power markets By examining its impediments and catalysts the book will provide policymakers with insight into the types of factors that must be effectively managed in order to maximize wind power development
