

# Advanced Apache Tomcat interview questions and answers to evaluate senior administrators

**Q** Can you explain the purpose of Tomcat's MBeans and how you would use them in monitoring and managing a Tomcat server?

MBeans, or Managed Beans, are Java objects that represent resources to be managed in a Java Management Extensions (JMX) system. In Tomcat, MBeans are used to monitor and manage resources such as server configurations, deployed applications, and performance metrics.

**A** Using MBeans, administrators can access various attributes and operations of Tomcat components through JMX clients. This allows for dynamic monitoring and management without restarting the server. For example, you can use MBeans to adjust logging levels, monitor session counts, or even deploy new applications.

Look for candidates who demonstrate a clear understanding of how MBeans integrate with JMX for comprehensive server management. They should also be able to provide examples of practical use cases where they have leveraged MBeans to solve specific problems.
