Volcanic Ash Soils Genesis Properties And Utilization:

Volcanic Ash Soils S. Shoji, M. Nanzyo, R.A. Dahlgren, 1994-01-06 Volcanic eruptions are generally viewed as agents of destruction yet they provide the parent materials from which some of the most productive soils in the world are formed The high productivity results from a combination of unique physical chemical and mineralogical properties The importance and uniqueness of volcanic ash soils are exemplified by the recent establishment of the Andisol soil order in Soil Taxonomy This book provides the first comprehensive synthesis of all aspects of volcanic ash soils in a single volume It contains in depth coverage of important topics including terminology morphology genesis classification mineralogy chemistry physical properties productivity and utilization A wealth of data 37 tables 81 figures and Appendix mainly from the Tohoku University Andisol Data Base is used to illustrate major concepts Twelve color plates provide a valuable visual aid and complement the text description of the world wide distribution for volcanic ash soils This volume will serve as a valuable reference for soil scientists plant scientists ecologists and geochemists interested in biogeochemical processes occurring in soils derived from volcanic ejecta

Soil Formation Nico van Breemen, Peter Buurman, 2007-08-20 Soils form a unique and irreplaceable essential resource for all terrestrial organisms including man Soils form not only the very thin outer skin of the earth's crust that is exploited by plant roots for anchorage and supply of

water and nutrients Soils are complex natural bodies formed under the influence of plants microorganisms and soil animals water and air from their parent material i e solid rock or unconsolidated sediments Physically chemically and mineralogically they usually differ strongly from the parent material and normally are far more suitable as a rooting medium for plants In addition to serving as a substrate for plant growth including crops and pasture soils play a dominant role in the biogeochemical cycling of water carbon nitrogen and other elements influencing the chemical composition and turnover rates of substances in the atmosphere and the hydrosphere Soils take decades to millennia to form We tread on them and do not usually see their interior so we tend to take them for granted But improper and abusive agricultural management careless land clearing and reclamation man induced erosion salinisation and acidification desertification air and water pollution and withdrawal of land for housing industry and transportation now destroy soils more rapidly than they can be formed

Roose,Rattan Lal,Christian Feller,Bernard Barthes,2005-12-09 The most complete nonpartisan source of information on this hot agronomic topic available today this book brings together a diverse group of papers and data to resolve the debate between sedimentologists and soil scientists and agronomists over whether the effects of soil erosion on carbon and atmospheric CO₂ is beneficial or destructive Divided **Plant-induced soil changes: Processes and feedbacks** Nico van Breemen,2013-03-09 This book by soil scientists and ecologists reviews how and why plants influence soils Topics include effects on mineral weathering soil structure and soil organic matter and nutrient dynamics case studies of soil plant interactions in specific biomes and of secondary chemicals influencing nutrient cycling the rhizosphere and potential evolutionary consequences of plant induced soil changes This is the first volume that specifically highlights the effects of plants on soils and their feedbacks to plants By contrast other texts on soil plant relationships emphasize effects of soil fertility on plants following the strongly agronomic character of most research in this area The aspects discussed in this volume are crucial for understanding terrestrial ecosystems biogeochemistry and soil genesis The book is directed to terrestrial ecologists foresters soil scientists environmental scientists and biogeochemists and to students following specialist courses in these fields
