Cullen,2015-09-03 Now in its second edition Sustainable Materials shows how we can greatly reduce the amount of material demanded and used in manufacturing while still meeting everyone's needs. Materials transformed from natural resources into the buildings, equipment, vehicles and goods that underpin our remarkable lifestyle are made with amazing efficiency. But our growing demand is not sustainable. Production of just five materials: steel, aluminium, paper, plastics and cement accounts for 55% of industrial emissions and demand for materials will double by 2050. Can we continue to live well but use less materials? So far people have considered the problem with only one eye open, hoping for a magic solution such as carbon capture and storage. But with both eyes open we have a whole new set of options. Rather than making more materials we can use them more wisely, with less material, keeping them for longer, re-using their parts and more. These options make a huge difference we really could set up our children with a more sustainable life without compromising our own. Sustainable Materials faces up to the impacts of making materials in the 21st century. Drawing on their experiences working with innovative materials as well as the facts and findings of their research, Julian Allwood and Jonathan Cullen provide an evidence-based vision of change that will allow us to make our future more sustainable. Packed with hundreds of colour photos and helpful graphs and diagrams, Sustainable Materials provides a thorough analysis of the problems that we face through wasteful attitudes and the growing demand for materials as well as an evaluation of practical and achievable solutions for the future. The first edition of this optimistic and richly informed book was listed as one of Bill Gate's top reads in 2015 and was also chosen as an Outstanding Academic Title by ACRL Choice magazine. This up-to-date revised edition is perfect for anyone with an interest in sustainability.

Roads, Runways and Resistance Steve Melia,2021-01-20 As a movement for social change it is important that we understand our own history. This is a compelling read. From the anti-roads protests of the 1990s to HS2 and Extinction Rebellion, conflict and protest have shaped the politics of transport. In 1989 Margaret Thatcher's government announced the biggest road building programme since the Romans. This is the inside story of the thirty tumultuous years that have followed. Roads, Runways and Resistance draws on over 50 interviews with government ministers, advisors and protestors, many of whom including Swampy speak here for the first time about the events they describe. It is a story of transport ministers undermined by their own Prime Ministers, protestors attacked or quietly supported by the police and smartly dressed protestors who found a way onto the roof of the Houses of Parliament. Today as a new wave of road building and airport expansion threatens to bust Britain's carbon budgets, climate change protestors find themselves on a collision course with the government. Melia asks what difference did the protests of the past make. And what impacts might today's protest movements have on the transport of the future.

Urban Transport Without the Hot Air Alan Cunningham,2017-03 A comprehensive look at creating a sustainable vision for the future of American transportation. This book describes how America has built its urban areas to be utterly dependent on everyone having access to private cars, with distances between daily amenities not suited for walking or cycling and acres of free parking always part of development. Alan Cunningham has

done extensive original research to show how urban planning needs to be done to put public transit walking and cycling back on an even footing with the car The key is to develop a public transit infrastructure with urban hubs so people can travel longer distances quickly and arrive within walking or cycling distance of their destination Without demonizing the automobile the book shows how other transportation options could out compete the car for prosperity public health and well being
