When Computers Went To Sea When Computers Went To Sea:

When Computers Went to Sea David L. Boslaugh, 2003-04-16 *When Computers Went to Sea* explores the history of the United States Navy's secret development of code breaking computers and their adaptation to solve a critical fleet radar data handling problem in the Navy's first seaborne digital computer system that went to sea in 1962. This is the only book written on the United States Navy's initial application of shipboard digital computers to naval warfare. Considered one of the most successful projects ever undertaken by the US Navy, the Naval Tactical Data System (NTDS) was the subject of numerous studies attempting to pinpoint the reason for the system's inordinate success in the face of seemingly impossible technical challenges and stiff resistance from some in the military. The system's success precipitated a digital revolution in naval warfare systems. Dave Boslaugh details the innovations developed by the NTDS project managers including project management techniques, modular digital hardware for ship systems, top down modular computer programming techniques, innovative computer program documentation, and other novel real time computer system concepts. Automated military systems, users and developers, real time process control systems, designers, automated system project managers, and digital technology history students will find this account of a United States military organization's initial foray into computerization interesting and thought provoking.

The Origins of Aegis Thomas Wildenberg, 2024-05-15 This book provides readers with an in depth understanding of the professional development of two notable and highly accomplished naval officers and their contributions to the development of the Aegis Weapons System. The main argument is that there was no single career path or set of formal qualifications for achieving excellence in the naval profession as characterized by selection for Flag rank. One of the major points is the revelation that a combination of essential personal traits and qualities

and important operational and technical experiences fundamental to the nature of naval warfare are critical to developing highly competent and confident officers. Such officers are needed to lead major acquisition programs capable of delivering innovative weapons systems for a twenty-first century Navy facing new age threats. **Computers and Commerce** Arthur Lawrence Norberg, 2005. Both ERA and EMCC had their roots in World War II and in postwar years both firms received major funding from the United States government. Norberg analyzes the interaction between the two companies and the government and examines the impact of this institutional context on technological innovation. He looks at the two firms' operations after 1951 as independent subsidiaries of Remington Rand and documents the management problems that began after Remington Rand merged with Sperry Gyroscope to form Sperry Rand in 1955. **Jacket Hard Charger!** James A. Treadway, 2005-07. *Hard Charger* is the story of a Cold War cruiser, the USS Biddle DLG 34, the last Navy cruiser powered by conventional steam, the last of the single-ended guided missile frigates, the last ship of her class but the first on the front lines. Biddle's story is traced from when her combat systems were conceived soon after the end of World War II and then designed and built during the 50s and 60s to her construction, commission, shakedown, combat assignments in Vietnam, her battle at PIRAZ, overhauls, upgrades, training exercises, and cruises to the North Atlantic and Mediterranean, and finally her decommissioning. The story is told by the officers and men who served aboard her, captains and deckhands, technicians and engineering officers, chiefs, petty officers, plankowners, and her decommissioning crew. Though Biddle is gone, her remarkable story remains, as does the freedom she helped protect. Historians, those currently involved with Navy combat systems, and those who served aboard a similar ship or during the Cold War will find Biddle's story interesting and thought-provoking. *Hard Charger* is the only book written about Biddle or any Belknap class cruiser. *History of Acquisition in the Department of Defense, Volume 1* Elliott V. Converse, 2012-06-12. This volume is a history of the acquisition of major weapon systems by the United States armed forces from 1945 to 1960, the decade and a half that spanned the Truman and Eisenhower administrations following World War II. These instruments of warfare—aircraft, armored vehicles, artillery, guided missiles, naval vessels, and supporting electronic systems—when combined with nuclear warheads, gave the postwar American military unprecedented deterrent and striking power. They were also enormously expensive. The volume is organized chronologically with individual chapters addressing the roles of OSD, the Army, Navy, and Air Force in two distinct periods. The first, roughly coinciding with President Truman's tenure, covers the years from the end of World War II through the end of the Korean War in 1953. The second spans the two terms of the Eisenhower presidency from 1953 through early 1961. The year 1953 marked a natural breakpoint between the two periods. The Korean War had ended, President Eisenhower and his defense team began implementing the New Look, a policy and strategy based on nuclear weapons, which they believed would provide security and make it possible to reduce military spending. The New Look's stress on nuclear weapons, along with the deployment of the first operational guided missiles and the rapid advances subsequently made in nuclear and missile technology, profoundly

influenced acquisition in the services throughout the 1950s and the remainder of the century As used in this study the term acquisition encompasses the activities by which the United States obtains weapons and other equipment In surveying the history of acquisition between 1945 and 1960 this study discusses or refers in passing to many of the hundreds of weapon system programs initiated by the services in that period but it is not a weapons encyclopedia Instead it investigates a few major programs in depth in the belief that such detailed examination best reveals the evolution of acquisition policies organizations and processes and the various forces influencing weapons programs *Rearming for the Cold War, 1945-1960* Elliott Vanveltner Converse, 2012 Book Description The first publication in a multivolume series on the history of the acquisition of major weapon systems by the Department of Defense author Elliott Converse presents a meticulously researched overview of changes in acquisition policies organizations and processes within the United States military establishment during the decade and a half following World War II Many of the changes that shaped the nature and course of weapons research and development production and contracting through the end of the century were instituted between 1945 and 1960 many of the problems that have repeatedly challenged defense policymakers and acquisition professionals also first surfaced during these years This study is the first to combine the histories of the Office of the Secretary of Defense OSD and the military services into one account The volume is organized chronologically with individual chapters addressing the roles of OSD the Army Navy and Air Force in two distinct periods Military Communications Christopher H. Sterling, 2007-10-16 An alphabetically organized encyclopedia that provides both a history of military communications and an assessment of current methods and applications Military Communications From Ancient Times to the 21st Century is the first comprehensive reference work on the applications of communications technology to military tactics and strategy a field that is just now coming into its own as a focus of historical study Ranging from ancient times to the war in Iraq it offers over 300 alphabetically organized entries covering many methods and modes of transmitting communication through the centuries as well as key personalities organizations strategic applications and more Military Communications includes examples from armed forces around the world with a focus on the United States where many of the most dramatic advances in communications technology and techniques were realized A number of entries focus on specific battles where communications superiority helped turn the tide including Tsushima 1905 Tannenberg and the Marne both 1914 Jutland 1916 and Midway 1942 The book also addresses a range of related topics such as codebreaking propaganda and the development of civilian telecommunications **The Government Machine** Jon Agar, 2003-09-26 An examination of technology and politics in the evolution of the British government machine In The Government Machine Jon Agar traces the mechanization of government work in the United Kingdom from the nineteenth to the early twenty first century He argues that this transformation has been tied to the rise of expert movements groups whose authority has rested on their expertise The deployment of machines was an attempt to gain control over state action a revolutionary move Agar shows how

mechanization followed the popular depiction of government as machine like with British civil servants cast as components of a general purpose government machine indeed he argues that today s general purpose computer is the apotheosis of the civil servant Over the course of two centuries government has become the major repository and user of information the Civil Service itself can be seen as an information processing entity Agar argues that the changing capacities of government have depended on the implementation of new technologies and that the adoption of new technologies has depended on a vision of government and a fundamental model of organization Thus to study the history of technology is to study the state and vice versa *Encyclopedia of War and American Society* Peter Karsten,2006 Publisher description

The Top Books of the Year When Computers Went To Sea When Computers Went To Sea The year 2023 has witnessed a noteworthy surge in literary brilliance, with numerous captivating novels captivating the hearts of readers worldwide. Lets delve into the realm of bestselling books, exploring the engaging narratives that have charmed audiences this year. When Computers Went To Sea When Computers Went To Sea : Colleen Hoover's "It Ends with Us" This heartfelt tale of love, loss, and resilience has gripped readers with its raw and emotional exploration of domestic abuse. Hoover expertly weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can triumph. Uncover the Best : Taylor Jenkins Reid's "The Seven Husbands of Evelyn Hugo" This intriguing historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reid's absorbing storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. When Computers Went To Sea When Computers Went To Sea : Delia Owens' "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens weaves a tale of resilience, survival, and the transformative power of nature, entrancing readers with its evocative prose and mesmerizing setting. These top-selling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of captivating stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a brilliant and gripping novel that will keep you speculating until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.
