Curricular Injustice Lauren D. Olsen, 2024-08-10 Medical schools have increasingly incorporated the humanities and social sciences into their teaching seeking to make future physicians more empathetic and more concerned with equity In practice however these good intentions have not translated into critical consciousness Humanities and social sciences education has often not only failed to deliver on its promise but even entrenched the inequalities that the medical profession set out to address Lauren D Olsen examines how U S medical school faculty conceived designed and implemented their vision of education tracing the failures of curricular reform She argues that the way medical students encounter humanities and social sciences material in practice has served to reinforce the status quo by teaching them to individualize systemic problems Students learn to avoid advocacy critique and attention to structural inequalities while also gathering that it will be up to them to find coping strategies for problems from burnout to systemic racism Olsen pinpoints the limitations of how clinical faculty understand the humanities and social sciences arguing that in structuring and teaching courses they assumed reinforced and glorified a white elite model of the medical profession Showing how deeply intertwined professional and social

leading medical sociologist assesses the evidence that social factors have direct causal effects on health and many diseases. He argues that stress, poverty, unhealthy lifestyles and unpleasant living and work conditions can all be directly associated with illness. Noting a new emphasis upon social structure in both theory and multi level research techniques, he argues that a paradigm shift is now emerging in 21st century medical sociology which looks beyond individual explanations for health and disease. As the old gives way to the new in medical sociology, the field is headed toward a fundamentally different orientation. William Cockerham's clear and compelling account is at the forefront of these changes. This lively and accessible book offers a coherent introduction to social epidemiology as well as challenging aspects of the existing literature. It will be indispensable reading for all students and scholars of medical sociology, especially those with the courage to confront the possibility that society really does make people sick.
