High mounds: These will add excitement and opportunity for the other structural features as well as creating diverse habitats. The mounds will host many varying habitats including woodland, meadow, scrub as well as numerous nesting features andibernacula's.

Dry stone walls: These will either be built in a traditional dry stone wall way or built with gabions filled with rocks. These rock walls will act as a retaining structure at the base of the mounds. This will warm up quickly in the sun as well as provide rocks and crevices. These will be perfect nesting opportunities for small mammals, insects, birds especially reptiles.

Sandy heath: By using the microclimate created by the south side of the mounds which heat up in the sun, by definition these areas are already beautiful species rich warm environments for all insects and the common ground will naturally grow most of the plants.

Wild flower meadow: These will be sown with wild flower seeds which will grow in the sun and the common ground will naturally grow most of the plants.

Shrubland: These will be sown with shrub seeds which will grow in the sun and the common ground will naturally grow most of the plants.

Wildlife Pond: The existing wildlife pond will be excavated to a depth of 1.5m. A heavy duty rubber liner will be installed. The edges will be planted with native marginal plants. The west side will allow the following features:

Ecological planting: These areas will be planted with a variety of native plants, shrubs, and trees. The edges will be planted with native marginal plants. The west side will allow the following features:

Long grass: Long grass will be left to grow in the sun and the common ground will naturally grow most of the plants.
