drone swarms and killer robots controlled by AI dominate the battlespace and determine the winner In AI Automation and  
War Anthony King debunks this science fiction tinged narrative of AI s military potential exploring instead the actual  
applications of AI by the armed forces over the last decade He finds that AI is not going to replace human commanders and  
combatants the machines are not about to take over Rather the military has used and will continue to use AI to process data  
at a scale and speed that exceeds the capacity of humans AI will be used primarily to improve military understanding and  
intelligence King explains that military commanders enabled by the data processing power of AI will be able to see the  
battlespace at a previously unattainable depth fidelity and speed AI will help the armed forces plan target and conduct cyber  
operations faster and more effectively In order to harness AI in this way however a radical organisational transformation is  
taking place The armed forces are integrating civilian technologists into operational headquarters to work alongside military
