

Монография посвящена изучению регуляции функционирования мочевого пузыря и предстательной железы в физиологических условиях и при патологических состояниях (доброкачественная гиперплазия предстательной железы и ее осложнение в виде острой задержки мочи). С помощью метода регистрации микроколебаний impedance этих органов с последующим их спектральным анализом (метод гармонического анализа биоимпеданса) изучили состояние органной гемодинамики и нейрогенную симпатическую и парасимпатическую активность в разные фазы цикла накопления и выведения мочи с оценкой функции мочевого пузыря методом цистометрии наполнения. Выявлены скоординированные изменения микроциркуляции и нейрогенной активности мочевого пузыря и предстательной железы в норме в зависимости от степени наполнения мочевого пузыря и при акте мочеиспускания. При моделировании патологических состояний функциональные взаимосвязи этих органов сохраняются. При этом нарушения функционального состояния одного из органов может индуцировать дисфункцию другого органа. Скоординированная нейрогенная регуляция тонуса гладкомышечных клеток детрузора и стромы предстательной железы подтверждает участие простаты в механизме удержания мочи.

Функция мочевого пузыря и простаты
