Tom Strachan, Andrew Read

Transcription Factors Human Molecular Genetics:

Transcription Factors Joseph Locker, 2003-12-16 This book focuses on the DNA binding transcription factors and the proteins with which they directly interact It examines the regulatory systems that modulate gene expression in all cells and the more specialized systems that regulate localized gene expression throughout the mammalian organism **Human Molecular Genetics** Tom Strachan, Andrew Read, 2018-03-29 Human Molecular Genetics is an established and class proven textbook for upper level undergraduates and graduate students which provides an authoritative and integrated approach to the molecular aspects of human genetics While maintaining the hallmark features of previous editions the Fourth Edition has been completely updated It includes new Key Concepts at the beginning of each chapter and annotated further reading at the conclusion of each chapter to help readers navigate the wealth of information in this subject The text has been restructured so genomic technologies are integrated throughout and next generation sequencing is included Genetic testing screening approaches to therapy personalized medicine and disease models have been brought together in one section Coverage of cell biology including stem cells and cell therapy studying gene function and structure comparative genomics model organisms noncoding RNAs and their functions and epigenetics have all been expanded *Human Molecular Genetics* Jamie Benton &, 2019-01-23 Molecular Genetics is one of the fast moving fields of science that has undergone a variable revolution over the last two decades leading to major advances in the understanding of gene structure and function at molecular level Human Molecular Genetics is the study of the molecular basis of human genetic disease developmental genetics neurogenetics chromosome structure and function molecular aspects of cancer genetics gene therapy biochemical genetics major advances in gene mapping and understanding of genome organization Genetics is the study of how genes bring about characteristics or traits in living things and how those characteristics are inherited Genes are portions of DNA molecules that determine characteristics of living things Through the processes of meiosis and reproduction genes are transmitted from one generation to the next Heredity is a biological process where a parent passes certain genes onto their children or offspring Genetics uses information from one or two genes to explain a disease or condition whereas genomics examines all of the genetic information to determine biological markers predisposing an individual to disease Genes are the best understood subsequence of DNA code Most genes clearly encode the data sequence representing a particular protein However all of the genes together are only a small part of DNA code The 30 000 odd genes in human DNA might only make up 4% of human DNA This book presents a view in depth of the principal aspects of life science Each chapter treats a discrete topic within the scope of biology and each is designed for students who are exposed to the topics for the first time Since considerable ferment exists in the biological sciences today it is increasingly important to keep pace with current developments *Chromatin Proteins and Transcription Factors as Therapeutic Targets*, 2017-02-17 Chromatin Proteins and Transcription Factors as Therapeutic Targets the latest volume in the Advances in Protein Chemistry and Structural Biology series is an essential

resource for protein chemists Each volume brings forth new information about protocols and analysis of proteins with each thematically organized volume guest edited by leading experts in a broad range of protein related topics Provides cutting edge developments in the field Contains chapters written by authorities Targeted to a wide audience of researchers specialists and students

A Handbook of Transcription Factors Timothy R. Hughes, 2011-05-10 Transcription factors are the molecules that the cell uses to interpret the genome they possess sequence specific DNA binding activity and either directly or indirectly influence the transcription of genes In aggregate transcription factors control gene expression and genome organization and play a pivotal role in many aspects of physiology and evolution This book provides a reference for major aspects of transcription factor function encompassing a general catalogue of known transcription factor classes origins and evolution of specific transcription factor types methods for studying transcription factor binding sites in vitro in vivo and in silico and mechanisms of interaction with chromatin and RNA polymerase

bHLH Transcription Factors in Development and Disease, 2014-09-09 This new volume of Current Topics in Developmental Biology provides a comprehensive set of reviews on bHLH transcription factors bHLH factors are vastly recognized for their diverse roles in developmental processes and their dysfunction underlies various human pathologies Each chapter is authoritatively written by a leading expert in the field and discusses every possible aspect of this huge and diverse field Covers the area of basic helix loop helix bHLH transcription factors in development and disease International board of authors Provides a comprehensive set of reviews on our current understanding on the function of bHLH factors in development of various tissues and how de regulation of these factors can cause or is linked to various human diseases

Human Gene Evolution David Neil Cooper, 1999-11-03 Presents the principles of human gene evolution in a concise and easy to understand fashion Uses examples of how evolutionary processes have molded present day genes drawn from the evolution of humans and other primates as well as from more primitive organisms With increasing attention in this expanding area this review forms a timely publication of our current knowledge of this important field Structure and function in the human genome The evolution of gene structure Mutational mechanisms in evolution

Physiology of the Gastrointestinal Tract Kim E. Barrett, Faye K. Ghishan, Juanita L. Merchant, Hamid M. Said, Jackie D. Wood, 2006-05-10 FROM THE PREFACE The original purpose of the First Edition of Physiology of the Gastrointestinal Tract to collect in one set of volumes the most current and comprehensive knowledge in our field was also the driving force for the Fourth Edition The explosion of information at the cellular level made possible in part by the continued emergence of powerful molecular and cellular techniques has resulted in a greater degree of revision than that of any other edition The first section now titled Basic Cell Physiology and Growth of the GI Tract contains numerous new chapters on topics such as transcriptional regulation signaling networks in development apoptosis and mechanisms in malignancies Most of the chapters in this section were edited by Juanita L Merchant Section II has been renamed Neural Gastroenterology and Motility and has been expanded from seven chapters with rather classic titles to more than twenty

chapters encompassing not only the movement of the various parts of the digestive tract but also cell physiology neural regulation stress and the regulation of food intake Almost all of the chapters were recruited and edited by Jackie D Wood The third section is entirely new and contains chapters on Immunology and Inflammation which were edited by Kim E Barrett The fourth section on the Physiology of Secretion consists of chapters with familiar titles but with completely updated information to reflect the advances in our understanding of the cellular processes involved in secretion The last section on Digestion and Absorption contains new chapters on the intestinal barrier protein sorting and ion channels along with those focusing on the uptake of specific nutrients These chapters were recruited and edited by Hamid M Said and Fayez K Ghishan Collected in one set the most current and comprehensive coverage of gastrointestinal physiology Information presented in a style that is both readable and understandable Valuable to the specialized researcher the clinical gastroenterologist the teacher and the student Features an entirely new section on Immunology and Inflammation Each section edited by the preeminent scientist in the field
