

TRANSISTOR SUBSTITUTION MANUAL

1. This manual is intended for use by technicians who are familiar with the basic principles of transistor operation and substitution. It is not intended for use by novices.

2. The purpose of this manual is to provide a systematic method for identifying and substituting transistors in electronic equipment. It is based on the principle that a transistor can be substituted for another of the same type, provided the replacement transistor has the same electrical characteristics and physical dimensions.

3. The manual is divided into two main sections: the first section deals with the identification of transistors, and the second section deals with the substitution of transistors. The first section is further divided into two sub-sections: the first sub-section deals with the identification of transistors by their physical characteristics, and the second sub-section deals with the identification of transistors by their electrical characteristics.

4. The second section is further divided into two sub-sections: the first sub-section deals with the substitution of transistors in power amplifiers, and the second sub-section deals with the substitution of transistors in small-signal amplifiers.
