

The background is a complex geometric composition. It features several large, overlapping triangles in shades of yellow, orange, and light brown. In the center, there is a white wireframe cube. Inside this cube, there are several smaller, nested geometric shapes, including a yellow hexagon and a white square. The word "TRANSFORM" is written in a bold, black, sans-serif font across the middle of the image, partially overlapping the central cube and the background triangles.

Popular Culture and Legal Pluralism Wendy A Adams,2016-06-17 Drawing upon theories of critical legal pluralism and psychological theories of narrative identity this book argues for an understanding of popular culture as legal authority unmediated by translation into state law In narrating our identities we draw upon collective cultural narratives and our narrative nomos obligational selves become the nexus for law and popular culture as mutually constitutive discourse The author demonstrates the efficacy and desirability of applying a pluralist legal analysis to examine a much broader scope of subject matter than is possible through the restricted perspective of state law alone The study considers whether presumptively illegal acts might actually be instances of a re imagined alternative legality and the concomitant implications As an illustrative example works of critical dystopia and the beliefs and behaviours of eco animal terrorists can be understood as shared narrative and normative commitments that constitute law just as fully as does the state when it legislates and adjudicates This book will be of great interest to academics and scholars of law and popular culture as well as those involved in interdisciplinary work in legal pluralism

Computational Models of Rhythm and Meter Georg Boenn,2018-06-20 This book presents the latest computational models of rhythm and meter that are based on number theory combinatorics and pattern matching Two computational models of rhythm and meter are evaluated The first one explores a relatively new field in Mathematics namely Combinatorics on Words specifically Christoffel Words and the Burrows Wheeler Transform together with integer partitions The second model uses filtered Farey Sequences in combination with specific weights that are assigned to inter onset ratios This work is assessed within the context of the current state of the art of tempo tracking and computational music transcription Furthermore the author discusses various representations of musical rhythm which lead to the development of a new shorthand notation that will be useful for musicologists and composers Computational Models of Rhythm and Meter also contains numerous investigations into the timing structures of human rhythm and metre perception carried out within the last decade Our solution to the transcription problem has been tested using a wide range of musical

styles and in particular using two recordings of J S Bach's Goldberg Variations by Glenn Gould. The technology is capable of modelling musical rhythm and meter by using Farey Sequences and by detecting duration classes in a windowed analysis which also detects the underlying tempo. The outcomes represent human performances of music as accurate as possible within Western score notation.
