Value Stream Mapping Outil Lean Ebook:

Value Stream Mapping for Lean Development Drew A. Locher, 2008-05-02 Written by one of the world's most respected consultants on Lean, this work presents a methodology for value stream mapping that is appropriate for any organization, whether it be service or product oriented. Over the past 25 years, Locher has proven just how powerful this process is, having employed it in healthcare, transportation, distribution, education, financial services, and manufacturing environments. Illustrating his methodology through the example of the imaginary DevelopTek company, he explains how to: Identify development waste; Assess an organization's current state and develop a Current State Map; Apply Lean principles to create a Future State Map. *Lean Administration: From Value Stream Mapping (Vsm) to Service Stream Mapping (Ssm)* David Meyner, 2019-02-11 This Business Excellence manual describes in a practical way concrete steps and examples to create a value stream analysis in the production area as well as a value stream analysis in the administrative area. This manual is not theoretical; it's written from practitioners for practitioners. It describes step by step the process for implementation of a value stream analysis and service stream analysis. For this purpose, the systematics from the production area were transferred graphically and comprehensibly to the administrative area. Lean administration has recently become increasingly important for companies to optimize their administration area to create transparency and sustainability in their daily work processes. Hereby, service stream mapping is a very useful tool. This manual gives the reader concrete implementation instructions and is suitable for both practitioners and students to understand the systematics of value stream mapping and service stream mapping in a short time. Learning to See Mike Rother, John Shook, 2003 Senior experts within the Toyota Production System often draw maps when on the shop floor. These maps show the current physical flow of a product family and the information flow for that product family as they wind through a complex facility making many products. Much more important, these simple maps, often drawn on a scrap of paper, show where steps can be eliminated, flows smoothed, and pull systems introduced in order to create a truly lean value stream for each product family. In 1998, John Shook and Mike Rother of the University of Michigan wrote down Toyota's mapping methodology for the first time in *Learning to See*. This simple tool makes it possible for you to see through the clutter of a complex plant. You'll soon be able to identify all the processing steps along the path from raw materials to finished goods for each product, and all of the information flows going back from the customer through the plant and upstream to suppliers. With this knowledge in hand, it is much easier to envision a future state for each product family in which wasteful actions are eliminated and production can be pulled smoothly ahead by the customer. In plain language with detailed drawings, this workbook explains everything you will need to create accurate current state and future state maps for each of your product families and then turn the current state into the future state rapidly and sustainably. In *Learning to See*, you will find a foreword by Jim Womack and Dan Jones explaining the need for this tool. An introduction by Mike Rother and John Shook describes how they discovered the mapping tool in their study of

Mike Rother, John Shook, 1998 *Value Stream Mapping* 50minutes, 2017-08-25 Understand value stream mapping in no time Find out everything you need to know about this powerful tool with this practical and accessible guide In an increasingly competitive business world identifying the areas where your company is losing time and money can give you a vital edge Value stream mapping is one of the most popular tools of lean management and is easy to apply to virtually any production process allowing you to locate and eliminate sources of waste and streamline your operations In 50 minutes you will be able to Understand the main principles behind value stream mapping and lean management Identify the key icons used in VSM and find out what they mean Draw up your own map of material and information flows and use it to identify sources of waste ABOUT 50MINUTES COM MANAGEMENT AND MARKETING The Management and Marketing series from the 50Minutes collection provides the tools to quickly understand the main theories and concepts that shape the economic world of today Our publications will give you elements of theory definitions of key terms and case studies in a clear and easily digestible format making them the ideal starting point for readers looking to develop their skills and expertise Seeing the Whole Value Stream, 2nd Ed. Dan Jones, Jim Womack, David Brunt, Matthew Lovejoy, John Shook, 2011-10-24 Shingo Research and Professional Publication Award recipient When the first edition of Seeing the Whole was published in 2003 the world was in a mad rush to outsource and offshore in pursuit of suppliers with drastically lower piece prices Today the situation is very different currencies have shifted labor costs in many low wage countries have risen and the potential for squeezing further price reductions from suppliers is largely exhausted What's more high product quality and rapid response to changing customer demands have proved elusive along unwieldy opaque supply chains Seeing the Whole Value Stream provides managers with a proven method for understanding and improving the value creating process that suppliers share with customers By identifying all the steps and time required to move a typical product from raw materials to finished goods the authors show that nearly 90 percent of the actions and 99.9 percent of the time required for the supply chain's current state create no value In addition the method clearly shows demand amplification of orders as they travel up the supply chain steadily growing quality problems and steadily deteriorating shipping performance at every point up stream from the customer Applying the method to a realistic example the authors show how four firms sharing a value stream can create a win win win win future in which everyone including the end consumer can be better off The workbook goes step by step through an improvement process that converts the traditional supply chain of isolated compartmentalized operations into an ideal future state value stream in which value flows from raw materials to customer in just 6 percent of the time previously needed The dramatically improved value stream also eliminates unnecessary transport links inventories and handoffs the key
