Lohmann, 2013-03-09 The destruction of the tropical forests proceeds Nobody at the symposium believed that the rapidly We all know that this has global ecological tropical forest area would remain untouched and economical consequences The problem The population explosion takes care of that argument is of such magnitude that it can only be commented The two main problem areas before us are pared to warfare The destruction of tropical first the wise utilization of that portion of the forests is not only detrimental to the global forest which will be used especially the intro ecology but also poses a serious threat to the destruction of planned forestry in such areas and people living in this area Furthermore the over second the development of a good plan for utilization of such a valuable resource poses a nature conservation in the tropics serious threat to the next generations The papers presented at the symposium will Apart from the problem generated for the most certainly not solve all the problems but we people in those regions and on earth in general hope they contribute to the very much needed there is a moral obligation to preserve the vast continued discussion of possible solutions which biological diversity in the tropical forests We must be implemented in the near future Ethnobiology of Uzbekistan Olim K. Khojimatov, Yusufjon Gafforov, Rainer W. Bussmann, 2023-08-25 Natural resources and associated biological diversity provide the basis of livelihood for humans particularly in rural areas and mountain regions around the world Over centuries indigenous peoples traditional societies and local communities have developed their own specific knowledge regarding plant use management and conservation The history of plant use by humans as food and to treat diverse ailments dates back to ancient civilizations Even though the advent of allopathic medicine has somehow minimized the role of medicinal plants in favor of synthetic drugs a number of modern drug discoveries have been based on medicinal plants used by indigenous peoples Ethnobiology is the burgeoning interdisciplinary scientific field which covers all sorts of interactions between plants and people and Central Asia is recognized as a plant diversity hot spot The mountains and valleys of this region are rich in unique medicinal and food plant species Local communities residing in the mountain regions of Central Asia possess unique knowledge of surrounding resources which is the result of many years of interaction with and selection of the most desirable and pervasive plant species present In this context this book provides comprehensive information on cross culture variation in the traditional uses of plants fungi and animal species as food medicine and for cultural purposes among the diverse communities of Uzbekistan The key areas of focus include plant diversity in Uzbekistan cross cultural variation in traditional uses of plant species high value medicinal and food plant species and threats and conservation status of plant species and traditional knowledge The Literature of Forestry and Agroforestry Peter McDonald, J. P. Lassoie, 1996 Discusses the evolution of forestry and agroforestry and presents the core literature in these fields covering both traditional and emerging areas Topics include changes in forest science in the 20th century the development of agroforestry literature the role of professional societies and the US

Conserving Biodiversity in Arid Regions J. Lemons, Reginald Victor, Daniel Schaffer, 2012-12-06 On the eve of the World Summit for Sustainable Development WSSD held in autumn 2002 in Johannesburg South Africa United Nations Secretary General Kofi Annan recommended five specific areas as focal points of discussion for the global forum Water energy health agriculture and biodiversity In his address Towards a Sustainable Future delivered just four months before the WSSD Secretary General Annan contended that concrete progress in each of these areas often referred to by their acronym WEHAB would be key to improving the quality of life not only in the developing world but across the globe For most people I think it is fair to say that the inclusion of biodiversity in a list that focuses on basic human needs may not be self evident Water energy health and agriculture yes But why biodiversity The truth is that biodiversity is just as critical to global well being as water energy agriculture and health This is because biodiversity both drives and shapes nature s intricate and dynamic structure in an enduring form and force that enables both current and future generations to enjoy its bounty *Land, Investment, and Migration* Camilla Toulmin, 2020-01-09 How do people survive and thrive in the uncertain and risk prone Sahel Land Investment and Migration seeks to answer this question through a long term study of the people of Dlongu bougou in Central Mali It uses a combination of infographics satellite images interviews and survey data to present the strategies and fortunes of individuals and their families in this region over 35 years In the early 1980s Camilla Toulmin spent two years in Dlongu bougou She has since revisited to explore how climate change population growth new technologies and land grabs have been affecting the livelihoods and prospects of local people since Land Investment and Migration Thirty five Years of Village Life in Mali brings together her findings A trebling in population unpredictable rainfall and the arrival of Chinese investment have forced people into new ways of making ends meet and building up wealth some doing much better than others This book presents the search for new cash incomes the shift of people from village to town and the erosion of collective solidarity at household and village levels Land Investment and Migration presents a mixed picture of a changing society It shows the vibrancy of the village economy rapid uptake of mobile phones and solar panels and increased migration It also shows the persistence of large family structures which offer some protection from the risks that many villagers face

Research Series ,1900 Trying to Grow Martina Aruna Padmanabhan, 2002 This book explores the negotiations at the inter and intrafaces of knowledge and gender It analyses the construction of gender and knowledge to reveal how innovations in agriculture either transform existing gender relations or unfold a transcending potential The case studies on the cultivation of cowpeas onions and soybeans by Dagombas and Kusasis show that supposedly gender neutral agricultural innovations become contested fields when men and women are Trying to Grow The contextualisation and social connotation of a crop decides over women s participation in rural development The book throws a fresh light on the management of agricultural knowledge Fragile Futures Helle Samuelson, 2024-02-02 Caring for small children and the family in Burkina Faso is hard work Although the health infrastructure in Burkina Faso is weak and many citizens feel neglected by the state

Fragile Futures shows that the state continues to play an important role in people's engagements and hopes for a better future. Based on more than twenty years of research engagement with Burkina Faso, it is an ethnography of how rural citizens address ambiguities of sickness and care and try to secure a decent future for themselves and their families. *Oursi Hu-beero* Lucas Pieter Petit, Maya von Czerniewicz, Christoph Pelzer, 2011. This final report describes the study of an exceptionally well preserved Iron Age building discovered in northern Burkina Faso, West Africa. The site of Oursi hu beero, meaning the big house of Oursi in the locally spoken Songhay language, was excavated in 2000 and 2001 by a scientific team from the universities of Frankfurt am Main and Ouagadougou. It is situated in the middle of a group of settlement mounds nearby the modern village of Oursi. In the year 2000, deep erosion gullies were threatening the architectural remains on the surface, which were provisionally dated to the 10th century AD. Scholars from both universities saw the importance of this site and undertook immediate action. But even they were not prepared for what they uncovered under only one metre of destruction debris. The rich diversity of incredible finds in the 25 different rooms rendered their exposure of enormous importance for the archaeology and history of Burkina Faso. Complete storage jars, metal equipment, wooden furniture, rope, and textile fragments, grinding stones, and charred botanical remains are only a fraction of the total assemblage of finds. Although we are dealing with the results of a single occupation phase and from one building, only the density of finds, the preservation of the architecture, and the absence of later disturbances add considerably to our understanding of daily life in this part of West Africa. Up to now, the limited contextual information about life in villages and towns prior to the historical periods has promoted divergent and weakly argued interpretations. This volume breaks open new grounds of investigation and calls for further study. Additionally, the editors hope that this report will stimulate and encourage the discussion between historians and archaeologists of the fascinating West African past. The current volume presents an introduction to the expedition, an analysis of the site formation processes, the presentation of the architectural features in depth, studies of the findings, and a lively account of the heritage management project that resulted in an on-site museum. Nine authors contributed to this rich and multifaceted final report. The account of the construction, intensive use, violent destruction, and subsequent rediscovery of the building is the enthralling subject of this volume, which is richly illustrated with numerous coloured drawings, photographs, maps, and reconstruction drawings. It melds archaeological, historical, and environmental data into a thrilling story. A story that reads like a new Crime Scene Investigation episode but happens to have been a real-life tragedy in the African Sahel almost 1,000 years ago. **The World of Soy** Christine M. subject and geographical index 113 photographs and illustrations mostly color Free of charge in digital PDF format on Google Books **Woody Plants in Agro-Ecosystems of Semi-Arid Regions** Henk Breman, Jan-Joost Kessler, 2012-12-06

This book provides a quantitative analysis of the role of woody plants in semi arid regions for the assessment of their benefits in agrosylvopastoral land use systems with productive and sustainability objectives The insights presented and conclusions drawn allow the additional benefits of woody plants for specific climatic and physical site conditions and land use systems to be estimated The Sahel and Sudan zones in West Africa on which the book focusses represent resource poor conditions whose ecological dynamics have been relatively well studied The role of woody plants in this region as assessed in this book is extrapolated to other semi arid regions leading to general conclusions on agroforestry's potential as an option for sustainable land use in semi arid regions The origins of this book go back to 1982 when the Club du Sahel requested that available data on woody plants in the Sahel region be synthesised to provide basic information to enable better attention to be given to woody plants in rural development programmes We are grateful to the Club du Sahel for this challenge Various people contributed to studies used in this book The preliminary inventory of the data available was made by Frits Ohler later his work was continued by Franciska Dekker *Peace Corps Times* ,1989
