Instrumentation Between Science, State and Industry B. Joerges, T. Shinn, 2012-12-06 In this book we appropriate their conception of research technology and extend it to many other phenomena which are less stable and less localized in time and space than the Zeeman Cotton situation In the following pages we use the concept for instances where research activities are orientated primarily toward technologies which facilitate both the production of scientific knowledge and the production of other goods In particular we use the term for instances where instruments and methods traverse numerous geographic and institutional boundaries that is fields distinctly different and distant from the instruments and methods initial focus We suggest that instruments such as the ultracentrifuge and the trajectories of the men who devise such artefacts diverge in an interesting way from other forms of artefacts and careers in science metrology and engineering with which students of science and technology are more familiar The instrument systems developed by research technologists strike us as especially general open ended and flexible When tailored effectively research technology instruments potentially fit into many niches and serve a host of unrelated applications Their multifunctional character distinguishes them from many other devices which are designed to address specific narrowly defined problems in a circumscribed arena in and outside of science Research technology activities link universities industry public and private research or metrology establishments instrument making firms consulting companies the military and metrological agencies Research technology practitioners do not follow the career path of the traditional academic or engineering professional

Aqueous Two-Phase Systems Rajni Hatti-Kaul, 2008-02-05 A mixture of two polymers or one polymer and a salt in an aqueous medium separates into two phases this phenomenon is useful in biotechn ogy for product separations Separation of biological molecules and particles in these aqueous two phase systems ATPS was initiated over 40 years ago by P Albertsson and later proved to be of immense utility in biochemical and cell biological research A boost in the application of ATPS was seen when problems of separations in biotechnology processes were encountered Its simplicity biocompatibility and amenability to easy scaleup operations make the use of ATPS very attractive for large scale bioseparations Despite the advantages ATPS enjoys over other separation techniques the application of two phase systems has for a long time been confined to selected labora ries Recent years have however shown a trend in which increasing numbers of researchers employ two phase partitioning techniques in both basic and applied research
