Trichloroethylene Tetrachloroethylene Chlorinated Monographs Carcinogenic:

Trichloroethylene, Tetrachloroethylene, and Some Other Chlorinated Agents IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, 2014 This volume of the IARC monographs provides an assessment of the carcinogenic hazards associated with exposure to seven chlorinated solvents including trichloroethylene tetrachloroethylene and their metabolites dichloroacetic acid trichloroacetic acid and chloral hydrate All these agents were previously assessed by IARC Working Groups more than 10 years ago and new epidemiological and mechanistic evidence has been considered in this reevaluation Trichloroethylene has been used in several industries such as manufacture and repair of aircraft and automobiles and in screw cutting while tetrachloroethylene is widely used in dry cleaning and as a feedstock for the production of chlorinated chemicals The IARC Monographs Working Group relied on epidemiological evidence carcinogenicity bioassays and mechanistic and other relevant data to evaluate the carcinogenic hazards to humans exposed to these agents

Toxicogenomics in Predictive Carcinogenicity Russell S Thomas, Michael D Waters, 2016-06-16 Research over the past decade has demonstrated that TGx methods of various types can be used to discriminate modes of mutagenesis as a function of dose TGx can quickly inform safety evaluation regarding potential mechanisms of conventional outcomes and can provide essential dose response information This can then be used to ascertain the sequence of key events in a putative mode of action as may apply in quantitative cancer risk assessment With the increasing complexity of research in mode of action investigations it is important to gain a better understanding of approaches to data integration and health risk assessment Furthermore it is essential to consider how novel test systems and newer methods and approaches may be used in future to gain a better understanding of mechanisms Toxicogenomics in Predictive Carcinogenicity describes toxicogenomics methods in predictive carcinogenicity testing mode of action and safety evaluation and cancer risk assessment It illustrates these methods using case studies that have yielded significant new information on compounds and classes of compounds that have proven difficult to evaluate using conventional methods alone This book additionally covers current and potential toxicogenomic research using stem cells as well as new bioinformatics methods for drug discovery and environmental toxicology This publication is an indispensable tool for postgraduates academics and industrialists working in biochemistry genomics carcinogenesis pathology pharmaceuticals food technology bioinformatics risk assessment and environmental toxicology

Cranor,2017-01-12 The world is awash in chemicals created by fellow citizens but we know little to nothing about them Understanding whether even the most prevalent ones are toxic would take decades Many people have tragically suffered serious diseases and premature death including children during development Why has this occurred Many factors contribute but two important ones are the laws permitting this and the manner in which science has been used to identify and assess whether or not products are toxic Both are the outcome of legislative corporate and judicial choices Congress created laws that in fact keep public health officials and the wider population in the dark about the toxicity of virtually all substances other than prescription drugs and pesticides Facing considerable ignorance about toxic substances impartially motivated scientists seeking to protect the public health are constrained by the natural pace of studies to reveal toxic effects Corporate pressures on public health officials and scientific obstruction substantially heighten the barriers to protecting the public When people have suffered serious as well as life threatening diseases likely traceable to toxic substances judicial errors barring relevant science in the personal injury tort law can and have frustrated redress of injustices Under both public health law and the tort law there are possibilities for improved approaches provided public leaders make different and better choices This book describes these issues and suggests how we could be better protected from myriad toxic substances in our midst

Assessing the Human Health Risks of Trichloroethylene National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and

Toxicology, Committee on Human Health Risks of Trichloroethylene, 2007-01-08 Trichloroethylene is a chlorinated solvent widely used as a degreasing agent in industrial and manufacturing settings. It is also used as a chemical intermediate in making other chemicals and is a component of products such as typewriter correction fluid, paint removers, adhesives, and spot removers. In 2001, EPA issued a draft health risk assessment and proposed exposure standards for trichloroethylene. PA's Scientific Advisory Board (SAB) reviewed the draft, and it was issued for public comment. A number of scientific issues were raised during the course of these reviews. Assessing the Human Health Risks of Trichloroethylene identifies and assesses the key scientific issues relevant to analyzing the human health risks of trichloroethylene, considering pertinent toxicologic, epidemiologic, population susceptibility, and other available information, including relevant published scientific literature. EPA's 2001 draft health risk assessment of trichloroethylene, scientific and technical comments received by EPA from public and private sources, and additional relevant information to be provided by the sponsoring agencies. This report highlights issues critical to the development of an objective, realistic, and scientifically balanced trichloroethylene health risk assessment. Guidance for hazard characterization of trichloroethylene is presented in Chapters 2 through 10. Chapter 2 provides guidance for evaluating large sets of epidemiologic data. In Chapter 3, the committee applies this guidance as an example in its evaluation of the epidemiologic data on trichloroethylene and kidney cancer, and this example should help guide evaluations of other cancer risks. Chapter 3 also assesses new information on the kidney toxicity of trichloroethylene and its metabolites and potential modes of action. Chapters 4, 5, 6, 7, and 8 evaluate the key issues regarding liver toxicity and cancer, reproductive and developmental toxicity, neurotoxicity, respiratory tract toxicity, and cancer and immunotoxicity, respectively. However, the committee's review focused on mode of action information to understand how trichloroethylene might affect certain processes differently in different species. Chapter 9 discusses susceptibility to trichloroethylene and its metabolites, and Chapter 10 describes important factors in considering trichloroethylene in mixtures. Physiologically based pharmacokinetic models are evaluated in Chapter 11, and guidance is provided on future directions for model development. Finally, Chapter 12 considers issues related to dose response assessment and quantitative assessment of risk. Cardiovascular Toxicity

Devendra K. Agrawal, Ranko Škrbić, Miloš P. Stojiljković, Dragan M. Djuric, 2025-09-26 The cardiovascular system is vital for human well-being, playing key roles in thermoregulation, nutrient transport, fluid balance, and protection from infection. Cardiovascular diseases are leading causes of morbidity and mortality. Pharmaceuticals, illicit drugs, toxins, and environmental factors can induce cardiovascular toxicity, causing structural changes and impairing blood flow. Co-morbidities like diabetes and obesity, along with epigenetic factors and infections, further enhance cardiovascular toxicity. Understanding these factors and developing better therapeutic approaches is crucial. New drugs and vaccines have improved disease treatment, but they can also induce adverse effects by affecting the endothelium, coagulation factors, platelet activation, oxidative stress, inflammation, baroreceptors, autonomic cardiovascular control, and electrophysiology. This issue has been overlooked for a

long time but is now gaining attention Expanding knowledge to the general population and health practitioners increasing research activities and developing better preventive and treatment strategies are essential Cardiovascular adverse effects can be induced by various drug classes used in cancer treatment infections and other disorders Understanding the mechanisms of cardiovascular toxicity and prevention methods is critical This book with 40 chapters contributed by distinguished scientists explores these issues highlighting knowledge gaps future directions and key points Understanding the biological complexity and interactions between genetic and environmental factors is crucial for developing better therapeutic approaches
