Utah Safety Inspection Manual 2012:

Assessing the Long-term Performance of Mechanically Stabilized Earth Walls Travis M. Gerber, 2012 Mechanically stabilized earth MSE walls are an important class of infrastructure assets whose long term performance depends on various factors As with most all other classes of assets MSE walls need periodic inspection and assessment of performance To date some agencies have established MSE wall monitoring programs whereas others are looking for guidance tools and funding to establish their own monitoring programs The objective of this synthesis project is to determine how transportation agencies monitor assess and predict the long term performance of MSE walls The information used to develop this synthesis came from a literature review together with a survey and interviews Of the 52 U S and 12 Canadian targeted survey recipients 39 and five respectively responded This synthesis reveals that unlike bridges and pavements MSE walls and retaining walls in general are often overlooked as assets Fewer than one quarter of state level transportation agencies in the United States have developed some type of MSE wall inventory beyond that which may be captured as part of their bridge inventories Fewer still have the methods and means to populate their inventories with data from ongoing inspections from which assessments of wall performance can be made In the United States there is no widely used consistently applied system for managing MSE walls Wall inventory and monitoring practices vary between agencies This synthesis examines existing practices concerning the nature scope and extent of existing MSE wall inventories It also examines the collection of MSE wall data including the types of performance data collected how they are maintained in wall inventories and databases the frequency of inventory activities and assessment practices relevant to reinforcement corrosion and degradation Later parts of this synthesis discuss how MSE wall performance data are assessed interpreted and used in asset management decisions This synthesis finds that the most well implemented wall inventory and assessment system in the United States is the Wall Inventory Program developed by FHWA for the National Park Service However this system like some others uses condition narratives in a process that can be somewhat cumbersome and subjective Other systems use more direct numeric scales to describe wall conditions and an advantage of such systems is that they are often compatible with those used in assessments of bridges As experience with MSE walls accumulates agencies will likely continue to develop refine and better calibrate procedures affecting design construction condition assessment and asset management decisions One portion of this synthesis is dedicated to summarizing the actions taken thus far by survey respondents to improve the long term performance of their MSE walls Many agencies prescribe the use of a pre approved wall design and or wall supplier Other actions or policies frequently focus on drainage related issues Summary *Pharmacy Clinical Coordinator's Handbook* Lynn Eschenbacher, 2016-01-01 Take Your Skills and Your Team to the Next Level Inside you ll get real life examples sample forms policies procedures checklists and more for every aspect of your practice including formulary management communications strategic planning and staff development Plus tables and figures for everything from delegation flow and budget schedules to
