Tidal Hydrology, Hydraulics and Scour at Bridges United States Department of Transportation, Federal Highway Administration, 2015-02-24 Hydraulic Engineering Circular No 25 The purpose of this manual is to provide guidance on hydraulic modeling for bridges over tidal waterways This document includes descriptions of 1 common physical features that affect transportation projects in coastal areas 2 tide causing astronomical and hydrologic processes 3 approaches for determining hydraulic conditions for bridges in tidal waterways 4 applying the hydraulic analysis results to provide scour estimates By using the methods in this manual better predictions of bridge hydraulics and scour in tidal waterways will result In many cases simplified tidal hydraulic methods will provide adequate results However when the simplified methods yield overly conservative results use of the recommended modeling approaches will provide more realistic predictions and hydraulic variables and scour *Stream Stability and Scour at Highway Bridges* Everett V. Conner, Thomas W. Doyle, Ken W. Krauss, 2007-06-24 Tidal freshwater forested wetlands represent an intriguing and und studied type of ecosystem in the southeastern United States The phy ographic position of tidal freshwater forested wetlands in occupying low lying coastal areas makes them susceptible to upland runoff tidal flo ing saltwater intrusion and other global climate change phenomena While information on them is rather sparse in the scientific literature these ecosystems are among the most sensitive to sea level rise and increased drought or flood frequency Tidal freshwater forested wetlands are readily impacted by acute and chronic exposure to even low levels of salinity The combined stress of flooding and salinity may compound the threat in these systems such that the margin for survival and compensation to changing climate is much less than for other coastal habitats In this book we bring together

principal investigators whose research focus has targeted the drology biogeochemistry community ecology forestry stress physiology and restoration of tidal freshwater forested wetlands in the southeastern United States It is our foremost intent to develop an up to date treatise that includes not only peer reviewed journal articles but also the dispersive grey literature on the topic in order to spark future research interest in tidal freshwater forested wetlands and to provide land managers with a concise overview of research findings We have thus formalized all scientific and common names into the standard of ITIS Integrated Taxonomic Infor tion System <http://www.itis>
