Understanding the Global Energy Crisis Richard A. Simmons, Eugene D. Coyle, 2014-03-15 We are facing a global energy crisis caused by world population growth an escalating increase in demand and continued dependence on fossil based fuels for generation It is widely accepted that increases in greenhouse gas concentration levels if not reversed will result in major changes to world climate with consequential effects on our society and economy This is just the kind of intractable problem that Purdue University s Global Policy Research Institute seeks to address in the Purdue Studies in Public Policy series by promoting the engagement between policy makers and experts in fields such as engineering and technology Major steps forward in the development and use of technology are required In order to achieve solutions of the required scale and magnitude within a limited timeline it is essential that engineers be not only technologically adept but also aware of the wider social and political issues that policy makers face Likewise it is also imperative that policy makers liaise closely with the academic community in order to realize advances This book is designed to bridge the gap between these two groups with a particular emphasis on educating the socially conscious engineers and technologists of the future In this accessibly written volume central issues in global energy are discussed through interdisciplinary dialogue between experts from both North America and Europe The first section provides an overview of the nature of the global energy crisis approached from historical political and sociocultural perspectives In the second section expert contributors outline the technology and policy issues facing the development of major conventional and renewable energy sources The third and final section explores policy and technology challenges and opportunities in the distribution and consumption of energy in sectors such as transportation and the built environment The book s epilogue suggests some future scenarios in energy distribution and use
