Howlett, Lakhmi C. Jain, 2016-06-03 This book contains the contributions presented at the ninth international KES conference on Intelligent Interactive Multimedia Systems and Services which took place in Puerto de la Cruz Tenerife Spain June 15 17 2016 It contains 65 peer reviewed book chapters that focus on issues ranging from intelligent image or video storage retrieval transmission and analysis to knowledge based technologies from advanced information technology architectures for video processing and transmission to advanced functionalities of information and knowledge based services We believe that this book will serve as a useful source of knowledge for both academia and industry for all those faculty members research scientists scholars Ph D students and practitioners who are interested in fundamental and applied facets of intelligent interactive multimedia *Proceedings of the Future Technologies Conference (FTC) 2019* Kohei Arai, Rahul Bhatia, Supriya Kapoor, 2019-10-09 This book presents state of the art intelligent methods and techniques for solving real world problems and offers a vision of future research Featuring 143 papers from the 4th Future Technologies Conference held in San Francisco USA in 2019 it covers a wide range of important topics including but not limited to computing electronics artificial intelligence robotics security and communications and their applications to the real world As such it is an interesting exciting and inspiring read **The Turn of Moore's Law from Space to Time** Liming Xiu, 2022-05-24 This book states that a space induced crisis is recognized as the cause of trouble that Moore's Law is currently facing The contemporary practice of this empirical law can be considered as happening within a space dominant paradigm An alternative of exploiting potential in the dimension of time is identified as an emerging paradigm in microelectronics The new practice is termed a time oriented paradigm It is justified as the turn of Moore's Law from space to time The resultant Time Moore strategy is envisioned as the next generation enabler for continuing Moore's Law's pursuit of ever higher information processing power and efficiency It

also serves as the perpetuation of the spirit that Moore's law is nothing but a collective storied history of innovations. In the first part of this book by following Thomas Kuhn's seminal work around the concepts of paradigm and scientific revolution, the argument for the Time Moore strategy (Time Moore to use time more) and the paradigm shift from space to time is carried out heavily through philosophical persuasion rather than technical proof due to the difficult challenge of change of mindset. The second part of the book provides solid technical materials for supporting this transition from the old paradigm to the new one. In short, the goal of this book is to reevaluate the contemporary practice of microelectronics, identify the cause of the current crisis, advocate a change of mindset to circumvent the crisis, and ultimately point out a new route for advancing. After achieving so many unprecedented accomplishments through several decades of relentless endeavor, it's time for the big ship of Moore's Law, i.e., the art of microelectronic system design, to make a turn.

Handbook of Research on Intelligent Data Processing and Information Security Systems Bilan, Stepan Mykolayovych, Al-Zoubi, Saleem Issa, 2019-11-29. Intelligent technologies have emerged as imperative tools in computer science and information security. However, advanced computing practices have preceded new methods of attacks on the storage and transmission of data. Developing approaches such as image processing and pattern recognition are susceptible to breaches in security. Modern protection methods for these innovative techniques require additional research.
