Emergent Timber Technologies Simone Jeska, Khaled Saleh Pascha, 2014-10-27 The old material of wood has been used to construct dwellings of different types since the dawn of mankind And not without reason Its low density combined with high rigidity good processability and its resistance makes it an excellent building material There is currently a pioneering renaissance of the timber construction for two distinct reasons first wood is increasingly being rediscovered as one of the most important renewable raw materials for sustainable construction Moreover a revolution in the construction of timber structures began several years ago with the ever progressive use of three dimensional CAD models for digitally

controlled robot manufacturing The book documents these developments in particular the engineering bonding techniques the introduction of digital production techniques and the innovative material developments of this material The chapter on composite structures and experimental structures specifically address trends toward the future oriented dimensions of timber construction In the final section outstanding designs are documented in detail such as the Club House of Haesley Nine Bridges Golf Course designed by Shigeru Ban in Yeosu South Korea and the double gymnasium in Borex Crassier Switzerland by Graeme Mann and Patricia Capua Mann *Specifications for Structural Concrete, ACI 301-05, with Selected ACI References* American Concrete Institute, 2005 *Using the Engineering Literature* Bonnie A.
