Topics In Optimal Transportation Graduate Studies In Mathematics Vol 58:

Topics in Optimal Transportation Cédric Villani, 2003 **Lectures on Optimal Transport** Luigi Ambrosio, Elia Brué, Daniele Semola, 2024-12-28 This textbook is addressed to PhD or senior undergraduate students in mathematics with interests in analysis calculus of variations probability and optimal transport It originated from the teaching experience of the first author in the Scuola Normale Superiore where a course on optimal transport and its applications has been given many times during the last 20 years The topics and the tools were chosen at a sufficiently general and advanced level so that the student or scholar interested in a more specific theme would gain from the book the necessary background to explore it After a large and detailed introduction to classical theory more specific attention is devoted to applications to geometric and functional inequalities and to partial differential equations This is the second edition of the book first published in 2018 It includes refinement of proofs an updated bibliography and a more detailed discussion of minmax principles with the aim of giving two fully self contained proofs of Kantorovich duality **Large-Scale Scientific Computing** Ivan Lirkov, Svetozar D. Margenov, Jerzy Wasniewski, 2012-05-24 This book constitutes the thoroughly refereed post conference proceedings of the 8th International Conference on Large Scale Scientific Computations LSSC 2011 held in Sozopol Bulgaria in June 2011 The 74 revised full papers presented together with 3 plenary and invited papers were carefully reviewed and selected from numerous submissions The papers are organized in topical sections on robust multigrid multilevel and multiscale deterministic and stochastic methods for modeling highly heterogeneous media advanced methods for transport control and uncertain systems applications of metaheuristics to large scale problems environmental modelling large scale computing on many core architectures multiscale industrial environmental and biomedical problems efficient algorithms of computational geometry high performance Monte Carlo simulations voxel based computations and contributed papers **Analysis and Geometry of Markov Diffusion Operators** Dominique Bakry, Ivan Gentil, Michel Ledoux, 2013-11-18 The present volume is an extensive monograph on the analytic and geometric aspects of Markov diffusion operators It focuses on the geometric curvature properties of the underlying structure in order to study convergence to equilibrium spectral bounds functional inequalities such as Poincaré Sobolev or logarithmic Sobolev inequalities and various bounds on solutions of evolution equations At the same time it covers a large class of evolution and partial differential equations The book is intended to serve as an introduction to the subject and to be accessible for beginning and advanced scientists and non specialists Simultaneously it covers a wide range of results and techniques from the early developments in the mid eighties to the latest achievements As such students and researchers interested in the modern aspects of Markov diffusion operators and semigroups and their connections to analytic functional inequalities probabilistic convergence to equilibrium and geometric curvature will find it especially useful Selected chapters can also be used for advanced courses on the topic **Fractal Geometry and Dynamical Systems in Pure and Applied Mathematics: Fractals in pure mathematics** David

Carfi, Michel Laurent Lapidus, Erin P. J. Pearse, Machiel Van Frankenhuysen, 2013-10-22 This volume contains the proceedings from three conferences the PISRS 2011 International Conference on Analysis Fractal Geometry Dynamical Systems and Economics held November 8 12 2011 in Messina Italy the AMS Special Session on Fractal Geometry in Pure and Applied Mathematics in memory of Benoit Mandelbrot held January 4 7 2012 in Boston MA and the AMS Special Session on Geometry and Analysis on Fractal Spaces held March 3 4 2012 in Honolulu HI Articles in this volume cover fractal geometry and some aspects of dynamical systems in pure mathematics Also included are articles discussing a variety of connections of fractal geometry with other fields of mathematics including probability theory number theory geometric measure theory partial differential equations global analysis on non smooth spaces harmonic analysis and spectral geometry The companion volume Contemporary Mathematics Volume 601 focuses on applications of fractal geometry and dynamical systems to other sciences including physics engineering computer science economics and finance

Pareto-Nash-Stackelberg Game and Control Theory Valeriu Ungureanu, 2018-03-09 This book presents a comprehensive new multi objective and integrative view on traditional game and control theories Consisting of 15 chapters it is divided into three parts covering noncooperative games mixtures of simultaneous and sequential multi objective games and multi agent control of Pareto Nash Stackelberg type games respectively Can multicriteria optimization game theory and optimal control be integrated into a unique theory Are there mathematical models and solution concepts that could constitute the basis of a new paradigm Is there a common approach and method to solve emerging problems The book addresses these and other related questions and problems to create the foundation for the Pareto Nash Stackelberg Game and Control Theory It considers a series of simultaneous Nash and sequential Stackelberg games single criterion and multicriteria Pareto games combining Nash and Stackelberg game concepts and Pareto optimization as well as a range of notions related to system control In addition it considers the problems of finding and representing the entire set of solutions Intended for researches professors specialists and students in the areas of game theory operational research applied mathematics economics computer science and engineering it also serves as a textbook for various courses in these fields

Modelling and Optimisation of Flows on Networks

Luigi Ambrosio, Alberto Bressan, Dirk Helbing, Axel Klar, Enrique Zuazua, 2012-12-14 In recent years flows in networks have attracted the interest of many researchers from different areas e g applied mathematicians engineers physicists economists The main reason for this ubiquity is the wide and diverse range of applications such as vehicular traffic supply chains blood flow irrigation channels data networks and others This book presents an extensive set of notes by world leaders on the main mathematical techniques used to address such problems together with investigations into specific applications The main focus is on partial differential equations in networks but ordinary differential equations and optimal transport are also included Moreover the modeling is completed by analysis numerics control and optimization of flows in networks The book will be a valuable resource for every researcher or student interested in the subject

Geometric Partial Differential

Equations - Part 2 Andrea Bonito, Ricardo Horacio Nochetto, 2021-01-26 Besides their intrinsic mathematical interest geometric partial differential equations PDEs are ubiquitous in many scientific engineering and industrial applications They represent an intellectual challenge and have received a great deal of attention recently The purpose of this volume is to provide a missing reference consisting of self contained and comprehensive presentations It includes basic ideas analysis and applications of state of the art fundamental algorithms for the approximation of geometric PDEs together with their impacts in a variety of fields within mathematics science and engineering About every aspect of computational geometric PDEs is discussed in this and a companion volume Topics in this volume include stationary and time dependent surface PDEs for geometric flows large deformations of nonlinearly geometric plates and rods level set and phase field methods and applications free boundary problems discrete Riemannian calculus and morphing fully nonlinear PDEs including Monge Ampere equations and PDE constrained optimization Each chapter is a complete essay at the research level but accessible to junior researchers and students The intent is to provide a comprehensive description of algorithms and their analysis for a specific geometric PDE class starting from basic concepts and concluding with interesting applications Each chapter is thus useful as an introduction to a research area as well as a teaching resource and provides numerous pointers to the literature for further reading The authors of each chapter are world leaders in their field of expertise and skillful writers This book is thus meant to provide an invaluable readable and enjoyable account of computational geometric PDEs
