Zygomatic Implants The Anatomy Guided Approach:

Zygomatic Implants Carlos Aparicio, 2012 Zygomatic implants have been in use for more than two decades and clinical follow up studies have shown good outcomes. However, this treatment approach is only now seeing a strong resurgence of interest because it can provide patients with a fixed dentition in a short amount of time without any grafts, general anesthesia or morbidity from a donor site even in challenging clinical situations. Thus, a technique of relative complexity becomes minimally invasive in its application. This book reviews the state of the art of zygomatic implants and outlines several new surgical techniques and adjunctive procedures. The authors cover the fundamentals of using zygomatic implants including the rationale behind the approach, anatomical and biomechanical considerations, imaging of the zygoma, possible sinus reactions, contraindications, prosthodontic considerations and management of complications. This book will arm clinicians with clear guidelines for using zygomatic implants in the rehabilitation of edentulous patients. **ZYGOMATIC IMPLANTS** □□□□

Readers will find information on indications, biomechanics, the role of imaging, digital treatment planning and all aspects of implant placement. Individual chapters are devoted to different procedures including the extramaxillary surgical technique, extended sinus lift with retained bone window, the anatomy guided approach, the quad zygoma technique and static and dynamic guided surgery. The use of zygomatic implants specifically in oncology patients is also given detailed consideration. Today the zygomatic approach offers many advantages for patients with severe maxillary resorption in whom grafting was in the past unavoidable. In providing an up to date global perspective on the zygoma concept, this book will be an invaluable source of guidance for practitioners at all levels of experience. **Implants and Oral Rehabilitation of the Atrophic Maxilla** Marco Rinaldi, 2023-03-03 This book covers the most suitable techniques for the rehabilitation of patients experiencing tooth loss, trauma or other situations resulting in bone atrophy.
