Chapter 2

The Measurement and Structure of the National Economy

■ Learning Objectives

I. Section Goals

- A. Differentiate among the three approaches to national income accounting (Sec. 2.1)
- B. Explain how GDP is measured (Sec. 2.2)
- C. Discuss the measurement of aggregate saving and its relation to wealth (Sec. 2.3)
- D. Explain the calculations of real GDP, price indexes, and inflation (Sec. 2.4)
- E. Define real and nominal interest rates (Sec. 2.5)

II. Notes to Eighth Edition Users

- A. In Sec. 2.3, we added a time-series graph showing the uses-of-savings identity: private saving, gross private domestic investment, the government budget deficit, and the current account balance, each as a percentage of GDP. The graph shows that since the early 1990s, the current account balance has been negative, so that foreigners have been buying U.S. assets, providing financing for U.S. investment and the government budget deficit. In some crisis periods, such as 1975 and 2008–2010, we observe large increases in the government budget deficit accompanied by sharp declines in gross private domestic investment and increases in private saving. In periods of strong growth, such as the late 1990s, we observe a decline in private saving and the government budget deficit, along with a rise in investment.

User Manual For Cain And Abel
