OUTDOOR CONDENSER BUSHINGS

Type "O"

THE TYPE "O" CONDENSER BUSHINGS are designed for oil circuit breaker and transformer applications.

Westinghouse bushings for circuit breakers are made by the Circuit Breaker Division at East Pittsburgh, Pennsylvania, while transformer bushings are made by the Transformer Division at Sharon, Pennsylvania. For this reason, identical and interchangeable bushings will be identified by different drawing numbers or different style numbers. They also will be identified by identical "Key" numbers. A "Key" number is a Westinghouse designation

applied to all bushings which are interchangeable with respect to voltage and current rating, internal dimensions and flange mounting.

These bushings have an oil-impregnated kraft paper condenser inside an oil-filled chamber as shown in Fig. 6. This chamber consists of an expansion bowl, an upper porcelain weather casing, a metal mounting flange, a lower porcelain and a bottom terminal porcelain support. All parts are held under pressure by a spring assembly. The entire chamber is sealed. All joints above oil level are sealed by soldering, brazing or welding. Joints between porcelain and metal parts are made with cork-neoprene sealing gaskets protected by asbestos-neoprene gaskets and held in compression by the springs in the expansion bowl.

The expansion bowls are constructed as shown in Fig. 6-A. All joints are either soldered, brazed, or welded. Heating of parts is prevented by use of non-magnetic materials and insulating against short circuiting paths in the magnetic field.

The upper porcelain weather casing and the lower porcelain are held in place by compression on their ends. Springs of the proper number and dimensions to provide the desired pressure are supplied in the bushings to meet all test requirements and the maximum operating and shipping requirements of the equipment for which the bushings are designed.

The flange is provided with a voltage tap receptacle and oil valve as shown in Figs. 6-D and 6-E.

The bushing is filled with degassed Wemco "C" oil. Sufficient gas space is left in the expansion bowl to prevent excessive pressures from being built up by the thermal expansion of the oil. The oil is not exposed to light and the expansion space is filled under low pressure with nitrogen so that there is no oxidation of the oil. The oil level reads correctly on the magnetic oil gauge when the bushing is vertical. The reading on the dial will be at a higher or lower level if the bushing is inclined from the vertical position.
