*The Timespace of Human Activity* Theodore R. Schatzki, 2010-04-12 This book shows that a concept of activity timespace drawn from the work of Martin Heidegger provides new insights into the nature of activity society and history Although the book is a work of theory it has significant implications for the determination and course not just of activity but of sociohistorical change as well Drawing on empirical examples the book argues 1 that timespace is a key component of the overall space and time of social life 2 that interwoven timespaces form an essential infrastructure of important social phenomena such as power coordinated actions social organizations and social systems and 3 that history encompasses constellations of indeterminate temporalspatial events The latter conception of history in turn yields a propitious account of how the past exists in the present In addition

because the concept of activity timespace highlights the teleological character of human action the book contains an extensive defense of the teleological character of such allegedly ateleological forms of activity as emotional and ceremonial actions Since finally the book's ideas about timespace and activity as an indeterminate event derive from an interpretation of Heidegger the work furthers understanding of the relevance of his thought for social and historical theory The book combines textual interpretation theoretical argumentation and empirical substantiation Many of its empirical examples are taken from the Blue Grass Horse Country around Lexington Kentucky where the author resides

*Proto-Phenomenology and the Nature of Language* Lawrence J. Hatab, 2017-05-05 How is it that sounds from the mouth or marks on a page which by themselves are nothing like things or events in the world can be world-disclosive in an automatic manner In this fascinating and important book Lawrence J Hatab presents a new vocabulary for Heidegger's early phenomenology of being in the world and applies it to the question of language He takes language to be a mode of dwelling in which there is an immediate direct disclosure of meanings and sketches an extensive picture of proto-phenomenology how it revises the posture of philosophy and how this posture applies to the nature of language Representational theories are not rejected but subordinated to a presentational account of immediate disclosure in concrete embodied life The book critically addresses standard theories of language such that typical questions in the philosophy of language are revised in a manner that avoids binary separations of language and world speech and cognition theory and practise realism and idealism internalism and externalism
